## ST. MARY'S.

John Connor, one of Rochester's old and most honored residents and railroad men, died last Saturday night at the residence of his daughter, Mrs. W. W. Dake, No. 64 Clinton place. Mr. Connor had not been in perfect health for some years, and it has been his custom to go South for several winters in search of strength by the beneficial change of the climate. His loss will be mourned by a host of friends and relatives.

Mr. Connor was born in 1837 at Adair, Ireland. He came to this country when he was four years of age, and when thirteen entered the employ of the New York Central railroad. He was in the continuous employ of the road for about thirty-five years, when he resigned about ten years ago because of failing health. During his connection with the road he made a host of warm friends.

Mr. Connor has been a resident of Rochester since 1872. In that year he moved here from Clyde. In 1858 he was married to Eva A. Rippenberg, and the union which resulted was ever a prosperous and happy one. His wife still survives him. He is also survived by an only child, Kitty, wife of William W. Dake, and also by three sisters and one brother.

The funeral took place at 9:30 o'clock Monday morning from the family residence, 64 Clinton place, and at 10 o'clock from St. Mary's church. A delegation from the Order of Railway Conductors and several of the members of the Ladies' Auxiliary of that order attended the funeral. Solemn requiem mass was sung by Rev. T. A. Hendrick of St. Bridget's church, assisted by Rev. A. Smeltz as deacon and Rev. Father Farron as sub-deacon. Interment was made at Holy Sepulchre cemetery.

Sharp and Thomas, John, Richard and James Gullen, twenty-eight grandchildren and two great-grand children, all of this city.

## St. Patrick's Lawn Fete.

The lawn fete given Thursday afternoon on the grounds of Mr. Chas. H. Wilkin of Lake avenue for the benefit of the Orphan Girls' Asylum, was one of the most interesting events of the season. The committee of ladies and gentlemen in charge were untiring in their efforts to make the affair as attractive as possible. The lawn was prettily decorated with streamers and bunting, and the various refreshment booths which dotted the grounds made a charming sight. The booths were placed on the summit of the slope which recedes from the side and rear of the house to the river. A large dancing platform was here erected for those who desired to dance.

During the afternoon the State Industrial School Band was present and rendered several excellent selections. The children were in attendance in large numbers, and they spent the time in playing about the broad lawn and partaking of the good things at the refreshment and candy booths.

In the evening the attendance increased and the lawn was made still more beautiful by the illumination of the electric lights, and the myriads of Chinese lanterns which were tastefully hung around the dancing platform and in the neighborhood of the booths. Maynard's orchestra played from behind a huge bank of potted plants near the dancing platform. The Polyhymnal Singing Society rendered several selections during the evening.

The proceeds of the festival are to be devoted to the establishment of a cooking school for St. Patrick's Orphan Asylum for Girls. A handsome sum was realized, and the ladies who had charge of the affair will begin the school in the near future.

Thursday evening, July 23, a pleasant social event was held at the residence of Mary McNulty, 111 Broadway. The lawn was beautifully decorated with Chinese lanterns and presented a fairy land appearance. Refreshments were served on the lawn, after which dancing was enjoyed by all. The feature of the evening's entertainment was the handsome manner in which the barn was decorated for dancing. Palms, potted plants, flags and bunting were used for the decoration, while beautiful music came from the orchestra which was hidden away among the ferns and potted plants. About thirty couples in all were present.

## WONDERFUL LOCOMOTIVE.

Will Climb Mountains and Turn Seemingly Impossible Curves.

A wonderful new locomotive is being manufactured. It has no driving wheels, but in climbing mountains and turning curves will perform feats of machine athletics that the builders of the ordinary type of locomotives believe to be impossible. Without the least difficulty it will draw heavy freight trains up grades of 10 per cent and will circle around on curves the diameter of which are only a few times their length.

This mechanical marvel was patented by E. Hays of Michigan. It is being built at the works of the Lima Locomotive works, Lima, O. Mr. Hays believes that within a few years locomotives of this type will be the only ones used for drawing freight. In the forests of Michigan they will be invaluable for hauling logs and in moving ore in the mountainous mining districts of Pennsylvania will greatly facilitate the development of the mines and lessen the cost of transportation.

The peculiarity of this locomotive is the absence of driving wheels. It is supported only on eight little wheels that, in an ordinary locomotive, bear the weight of the forward part of the boiler and tender. These wheels rotate under two center bearing, swiveled trucks, upon which the main body of the locomotive rests. Its wonderful curve-turning powers come from the long distance between the forward and rear sets of wheels, and its grade mounting ability from their small circumference. The engines are vertical, and the piston rods act directly on a flexible shaft, through which the power is communicated to the wheels that rest on the rails by means of cog wheels. The boiler is hung between two heavy steel beams, which form the locomotive frame and are securely attached to the axle by heavy cross steel channel beams directly over the trucks.

A vast amount of money and time has been spent in bringing the invention to its present state of perfection. The best materials and the most skilled workmanship have been employed in its construction. If the new locomotive meets with the success that is predicted for it, the American public may soon have the pleasure of watching a locomotive way up the sides of mountains where hitherto a constant would have found it good, hard work to travel.—New York Journal.

## Shoes.

It by no means follows that the more weight the feet carry the greater will be the warmth. In fact, the lighter shoe has an advantage over the heavy one in that the stiff, unyielding sole usually found on the latter prevents a healthy motion of the muscles of the foot when walking. The lighter shoe, with flexible properties, permits full play of the muscles and joints, and therefore a more perfect circulation of the blood is promoted, which is the secret of bodily warmth. Other things being equal, a light sole, with a thin cork inner sole, the flexibility of which is perfect, is a good bottom for cold weather.
