THE MEADOW BARS.

We stood beside the meadow bars, The sun was sinking low Behind a bank of rosy clouds, Fringed in with amber glow.

Far as the eye could see, To distant hills with purple shade, Where slept the flower and bee, The twinkling of the sheep's sweet bell.

Far down in the willow copse, And swaying with the evening wind, Was moved the clover tops, The evening hand swept o'er the sky.

There were only three in our party, Tom and me and some of the boys, together being on our way to the meadow bars.

When Tom and I first came across him Bill was down on his back. This tucker had just about panned out and he wasn't too shabby left to buy water.

Bill wasn't to say big, but he was strong, and as wiry as they made 'em. Tim and me was used to work, but bless ye, we weren't in it no longer.

One thing was sure, Bill hadn't any more of a digger, no, nor yet for so very long neither. We stopped at Coolgardie for a month and it was long enough.

We were getting pretty near full up of this and Bill he was the fullest up of the lot. One day there came news that gold had been struck heavy to the northwest.

MURDEROUS MONKEYS.

They Kill Suckling Lambs for the Milk in Their Stomachs. The Tshakma, a monkey of the baboon family, which is rather common in South Africa, has become a perfect plague of the Transvaal farmers.

The same ape has also quickly learned to distinguish them from women. At the approach of a man they quickly flee, while they allow women to come quite near, paying no attention to them.

Almost the entire population of Montreuil, France, is engaged in the manufacture of dolls' heads. The stuff from which the heads are made is composed of lime and earth.

A man came in the other day and actually paid us a dollar on subscription, a new subscriber, and came voluntarily, we did not pursue him with a shotgun or Winchester, nor did we lay him at night in some dark place with a bludgeon or sandbag.

It is not generally known, but there is some cruelty in the keeping of gold fish. Half of such captives die from sheer want of rest. As fish have no means of shielding their eye by a lid, they cannot endure continuous light, and suffer in a glass vessel, where they are entirely exposed, as evident from the way in which they dash about, and go round and round, until fairly worn out.
