#### ORCHARD & GARDEN.

FRUIT TREES FOR SMADE.

he Pear One of the Moss Satisfic That Peruese.

The denizens of towns find the cear one of the most satisfactory fruit trees for shade. It is deep rooting and many other things may be successfully grown right up to their trunks. Its sects trouble them little. They grow rather fast, but it is many years be fore they get an objectionably large size. The apple makes a spreading head and there is soon shade major its branches, and besides, the beauty of its blossoms in spring makes the tree appreciated fully equal to a mere ornamental one. It is not a very serious a desirable shade, but birds make too fre with the fruit, and there is the temptation to break branches. The sour or pie cherrice are, however, not relished by birds. European walnut trees grow rather slowly. It is usually ten years before they can produce nuts in any quantity, but after this they are regarded as treasures with which their owners will not willingly part. For outlifty and grateful shade — Labined few trees can rival them.—Thomas Mechan in Ladies' Home Journal. other things may be successfully

17 for 'he well selected stock-having been properly stored. The first need is a good cold storage room. This any affair as supposed. Construct a cel. whiskey and other are blended. lar under your barn or carriage house Make the walls frost proof. Double Do not grout the bottom, for apples need moisture. Close the windows and bank in leaves in November, Keer with very little decay, all winte: Those who threw away their apples compensation.

### A GHOSTLY STORY.

Judge Phillips, of the Illinois Supreme

Court Saw His Dead Friend. Jease J. Phillips, one of the judges re-elected recently, told a strange story not long ago of his experience is no other remedy but confinement with a "spook." It was told at Hills- and the closest guarding at all times." good for a dosen years yet. I'm more likely to die than you are." His ful subject of conversation, but as the time came to say goodby he repeated his remark. "Remember," he said, "I have promised I will look you in the face again before I die."

Days and weeks passed on, and Judge Phillips soon forgot the speech, for he was not a man who placed much faith in warnings, signs and the like. One summer day his thoughts were far away from death or ghosts. He was riding with a friend over the smooth country roads of Montgomery county. They talked of the beautiful landscape, of golden wheat, green waving oats and forest trees beyond. The judge was driving. His companion was in the midst of a remark when suddenly the judge dropped the lines. "Look!" he whispered. "There,

over the dashboard!" he said. "I see nothing," said his companion. What do you mean?"

Judge Phillips sat as if spellbound. though his companion was unable to see anything but the empty air. Before him, for several minutes, there stood the image of his old friend who had said, "I shall look you in the face again before I die." He was there, ife size, face arms and shoulders, as if he were standing on air, just in front of the dashboard.

Judge Phillips does not often tell the story, but when he does he says, "I pever saw a human being more plainly than I saw him standing there before me and looking in my face." How long the vision lasted he could not tell but at last it seemed to melt into air, and the judge picked up the lines

and drove on. His friend was inclined to laugh at him, and he himself made no attempt to account for the strange happening. But early next morning he received a telegram announcing that on the day before, at the very time when he was taking his drive, his friend had died suddenly.

Mme. Materna, the great Wagner singer, will not appear again on the concert stage, preferring to retire when her fame is at its height, so that there may be no memory of failing power in the future.

A Minmesotal farmer insists that corn makes a better and cheaper fuel than coal. He raised enough corn on ten acres to heat his house and feed two horses and a cow through the

### Save The Children.

When children are attacked with cough, cold and croup, Dr. Bull's Cough Syrup will prove a quick and sure cure. Mr. Elmer E. Baker, Blandon, Pa., writes: "We have used Dr. Bull's Cough Syrup for cough. cold and croup, and found it the best cough medicine and cure for these affections. We never run out of it. but always keep it on hand." Dr. Bull's Cough Syrup is sold everywhere for 25 cents. Insist on having it.

#### ETHER DRINKING.

A VICE THAT BEGAN IN IRELAND AND HAS SPREAD ALARMINGLY.

the Habit, Because it is More Refined Than the Passion for Alcohol, is Heginnian to Claim Many Victime—It Seen Leads to franity and Double

Lesson for Apple Growers ought to Holest excitement with shundard selections of the learned from 1996. The board of the learned from 1996. be learned from 1896. The best apples vation. Sometimes epileptiform conwere worth \$2 a barrel—or more. This vulsions are observed, and when the dose is too strong they are followed by stupor. Nothing in the effects has been observed which resembles delirfarmer can have. It is not so costly an ium tremens, except in cases in which

But if drunkenness from ether is less degrading than drunkenness from the floor above with tar paper between alcohol, it is far more dangerous. It leads to insanity and death, and soon brings about marked changes in the temper and in the health of the etherothe fruit in bins about one foot deep maniac. Take this portrait of the if properly picked and handled and ether drinker and you will find scricus sorted, apples will keep in such a cellar motives for avoiding the drug. "The ether drunkard is quarrelsome and untruthful. His condition of mind relast fall had they placed them in care certain nervous diseases. He suffers ful storage would have received a fair sembles that of people afflicted with from gastric troubles and nervous prostration. He becomes the slave of his passion, like the opium smoker; and the cures of the passion are rare. It is impossible to save a person afflicted with this malady, except on the condition of his renouncing completely the ether habit, and this seidom hap-pens. As a rule, an etheromaniac is of the Illinois state supreme court, never cured, except by the impossibility of satisfying his passion. There

boro, Ill., his home for many years, Like the morphinomaniacs, the and which statusted not far from the slaves of other may become addicted to uncanny place where the spirit from their vice after certain maladies, the other world appeared. Many years Sometimes when a patient suffers from headache a handkerchief steeped in Josephan to David. Together they ether is put under his nose. Relief discussed simost every theme of comes quickly, and he inhales the drug Practical Horseshoeing.

Cullen.

Science, philosophy and ethics. On one with delight. After a few inhalations occasion the judge noticed that his great freshness in the face and in the friend seemed to be in unusually robust health, and he remarked about it. is doubled in order to double the agreelie was much curprised to see his
friend grow suddenly serious, and say,
"I shall look you in the face again
below I die." "Nonsense! replied the
fudge, don't talk of dying!" You are
sults in death.

The origin of this singular vice in obscure. Some say that the frish peasants fogan to drink ether in 1840 at the time when Father Matthew was preaching the crusade against alcohol. Others accuse the doctors of having prescribed ether too liberally. Finally, the question of price has its importance, especially among the poorer classes, for ether produces intoxication easily and is cheaper than alco-

Thank heaven, the other drunkards are at present relatively rare in Paris. In London the keepers of the various squares and parks often find under the trees empty vials labelled "ether" that have been thrown there by the maniacs who quit their homes in order to indulge their favorite passion at their ease. At Epsom after the races many finks of other are picked up among empty champagne bottles.

But it is in certain portions of Ireland that the vice of other drinking is most common. There are regular other shops, the oldest of which was established in 1840 at Draperatown, There they drink a mixture of sicohol and they drink a mixture of siconol and ether, fifteen grammes of which are sufficient to but any one in a revery. The railroad in the little district of Crookstown carries every year 2,000 tons of elker, and an equal quantity at least is brought there by other roads. Two serchants of the neighboring villages sell every year 4,500 pints of ether. At Despersiown and at Creossiows the air is charged with the vapors of ether on market days, and this same odor is present constantly in the third-class carriages of the Derry Central Railway. Everybody in that part of Ireland drinks ether.

A Casplagrable Sole.
At a watering piece in the Pyronees, says a French journal, the conversefrom rock to rock, from precipics to precipice, and as soon as it has passed the frontier the echo assumes the Spanish accent."

Queer Facts About Spiders. The body of every spicer contains four little masses pierced with a multitude of holes, imperceptible to the naked eye, each hole permitting the passage of a single thread; all the threads, to the number of 1,000 to each mass, join together when they come out and make the single thread with which the spider spins its web, so that what we call a spider's thread consists of more than 4.000 threads

Fine Fruit.

"What do you do to make make you so strong and healthy?" finquired the dyspeptic. "Live on fruit half a million dollars yearly on her alone," answered the friend. "What army, can turn out 100,000 trained mon kind of fruit?" "The fruit of industry, in two days in case of need, and has and I am never troubled with indiges a reserve of 100,000 more and a land

#### EXCELSIOR.

Manufestore of Wood That Mas Many Unioned to Sold in Greek Quantifica. The material known as excelsion is not refuse, nor is it made of shavings; it is an article of regular manufacture. Excelsion is of American invention and it was first made in this country

and it was first made in this country thirty-five or forty years ago, the present output ancunts to thousands of tons annually and the use of it is all the time increasing.

Excelsior is made in many parts of the country, almost slways is mills that are in close proximity to the forests from which the supplies of wood are taken. A considerable amount of excelsior is made in conjunction with other manufactures; for example, it is not unusual to set up a few excelsior machines in a lumber smil; but there is at least one concern in the United States that makes nothingsbut excelsior, and has, at a number of dif-ferent points, mills devoted solely to the production of these curling fibres of wood.

Basewood and poplar are the woods used in the production. The logs are sawed into lengths of eighteen inches, which is the length of a fibre of ex-cessior. These blocks are split into halves and the wood in properly sea-soned. Excusior is made of different degrees of coarseness and fineheas of fibre. In the manufacture a series of knife points run down the face of the block cutting into the wood in parellel lines that are spaced according to the width of the fibre to be made. A fol-lowing knife slices off the whole face of the block thus scored. The fibres curl and commingle as the knife sets them free. An excelsion machine makes 300 to 300 strokes a minute, every stroke cutting off a tier of fibres scross the face of the block. The usual commercial package of excelsion is a bale weighing about 250 pounds. At wholesale excelsion sells at \$15 to

Excelsion is extensively used for acking purposes, and in the manufacture of hedding and in various other upholstery uses. It is also largey used for filtering purposes, and it has various other uses. Excelsion is now manufactured in Germany and France, where it is called wood wool. The wood used in the manufacture in those countries is brought from Norway and Sweden, and the manufact-ured product costs more there than it does here.

American excelsior is exported to various foreign countries. The export demand has not been great, but it is now increasing.

Work for Shetland Penies. H. A. Ross, the well-known farmer of this place, has in contemplation a novel enterprise, which if carried out is likely to pay well and introduce imto the carrying trade of Alaska a new.

of Shetland ponies. He has always enjoyed a handsome revenue from this is doubtful. source by selling ponies to wealthy people in various parts of the State for use by their children. The original pair from which the herd arrang were imported from the Shetland isiands by the late George McKinley. These islands are located off the coast of Scotland and are very sold and

To guard against the severity of the climate the ponies have a thick and shaggy coat of hair, and as it has been a clear case of the aurvival of the fittest, they are far more hardy than the average horse, mule, or burro. In their native land they are employed for both riding and carrying purposes. bearing the heaviest man or an equal. amount of goods with case. They are adapted for use in the mountains as their island home was mountainous and rough in the extreme. They are more rapid in their movements than larger animals, and as they require littic feed or care, they are suitable for use where very little of either is pos-

Due consideration of all these facts has given Mr. Ross the belief that the little animals would be admirably adipted for use in packing goods over the desolate mountain passes of Alaska, and acting on this belief he will take a portion of his herd, which includes 100 head, to Juneau in the spring. That city is the distributing point for all the mining camps, and he feels certain that he will be able to dispose of the ponies at a good price. His experiment will be watched with interest, as his plan is a complete reversal of public opinion is regard to Shetland project. They have a ways been regarded at the palainthed pair of wealthy lorses, and to disners shell into this channel of usefulness, and the der discussiones so severs and training is as startling as it is novel. -Dixon (Cal.) Tribune.

A Little French Trick. An Englishman resently took a sest at a case table in Paris. A French man set on the other side of it. He began to play wish the lesser of a self-ser siphon, when suddenly and seemingly by accident a sixual of the seriated water struck the Englishman in tion at table turned upon a wonderful echo to be heard some distance off on the Franco-Spanish frontier. "It is astonishing," said an inhabitant of Garonne. "As soon as you have spoken you hear distinctly the voice leap
