A PROFITABLE THROW.

A Green Country Lad Who Won a Fortune at Wrestling.

"Had I caught my train that night," laughed the man who had nothing to do for a quarter of a century but sit and watch pine trees grow to swell his bank account, "I would probably be a farmer now, trying to raise a mortgage and a few other things. I had gone to a little town in lower Wisconsin to see a cell that a man there wanted to sell me. I was a good judge of stock and shrewd on a trade, but a greener country lad never broke into a town. I would have walked back to the farm after I found myself too late for the train, but I saw a handbill announcing a show that night, and I couldn't resist the temptation to see it, though it did cost a quarter.

"In my hilarious appreciation I was more of an entertainment than they had on the stage, especially as I was utterly oblivious of the fact that I didn't look like any one else in the audience. Toward the end a huge fellow came out, tossed cannon balls in the air, held men out at arm's length and lifted heavy weights. After this showing of his prowess he offered \$10 to any one who could throw inside of two minutes. I was the crack wrestler in our section, though most present knew it, and I felt as though the challenge was aimed directly at me. I turned hot and cold during a few seconds of intense silence. Then I sprang up and as I came out of my old blouse shouted: 'I'll go you, b'gosh!' There was a roar of laughter and then some of them about me urged me not to go up there and have my neck broken. But one old man told me to go in. It was a tough job, but I finally threw the giant almost through the floor with a hip lock. There was a little hesitancy about giving me the \$10, but the crowd shouted till I got it. Then the old gentleman took me home with him and in a week I had charge of all the teams in his lumber camps. In time I became a partner and he cleared the way to make me rich. That was really a match for a million."

Making Plate Glass.

A visit to a plate glass works reveals nothing perhaps more interesting than the casting tables on which the heavy plate glass used in most store windows is cast. "The casting tables," said the superintendent of a large New York plate glass factory to a reporter recently, "are the most important pieces of apparatus in this establishment. Each table is about 20 feet long, 15 feet wide and from 7 to 8 inches thick. The heavy strips of iron on either side of the tables afford a bearing for the rollers and determine the thickness or diameter of the glass to be cast.

"The rough plate is commonly nine-sixteenths of an inch thick, but after polishing it is reduced to six or seven-sixteenths. All casting tables are mounted on wheels which run on a track made to reach every furnace and annealing oven in the factory. The table having been wheeled as near as possible to the melting furnace, a pot of molten glass is lifted by means of a crane, and its contents poured quickly out on the table. A heavy iron roller then passes from end to end, spreading the glass to a uniform thickness. This rolling operation has to be done by expert hands quickly, as the boiling glass, when it comes in contact with the cold metal of the table cools very rapidly. When the rolling process has been completed, the door of the annealing oven is opened and the plate of glass is introduced. The floor of the annealing oven is on the same level as the wheels of the casting table, so that the transfer can be made by rail quickly. When the glass is ready to be taken out of the oven its surface is very rough. In this condition it is used for skylights and other purposes where strength is desired rather than transparency. But when intended for windows it is ground, smooth and polished, and is then ready for the market."

Water That Petrifies.

Extraordinary qualities are possessed by the River Tago in Spain. It has been said to petrify the sand of its bed, and if a stone falls in the stream and alights upon another, in a few months they unite and become one stone. Fish cannot live in its waters.

More Diamonds in Pretoria.

A rich diamond mine has been discovered near Pretoria, the stones lying in a volcanic pile, containing minerals closely resembling those of the older mines. A two-foot seam of coal is reported near the Bechuanaland line.

A Costly Rosary.

Leo XIII recently presented a most beautiful and extravagant gift to the Queen Regent of Spain. It is a rosary the chain made of the finest gold. The beads are of alternate rubies, diamonds and emeralds; the gift is priceless.

Sugar Beet Records.

Especially good sugar is being manufactured this season from beets at Grand Island, Neb., the beets testing as high as 18 per cent sugar, according to reports sent out at the close of the first week of manufacturing.

Pittsburg's Deep Well.

A well near Pittsburg, Pa., is more than a mile deep and may be sunk two miles for scientific purposes. It flows oil and gas in paying quantities, the gas driving the boring engines.

Court Manners in Georgia.

Judge Reid, of the Atlanta (Ga.) City Court, has recently found it necessary to issue an order prohibiting attorneys from eating peanuts while the court is in session.

Queer Lighthouse.

A lighthouse of bamboo has just been built in Japan. It is said to have greater power of resisting the waves than any other kind of wood, and does not rot like ordinary wood.

Soap Bubble Mosaics.

The beautiful colors seen in the soap bubble arise from the fact that the bubble, being very thin, reflects light from both the outer and inner surfaces of the film.

AMERICAN MONKEYS.

Found Exclusively in South America, But Never North of Panama.

The American monkeys or cebidas, are found exclusively in South America, and are never seen north of Panama. Their tails are invariably long, and in some genera, prehensile.

The coaita is one of the spider monkeys, so called from their long, slender limbs, and their method of progressing among the branches. The tail seems to answer the purpose of a fifth hand, as it is capable of being used for every purpose to which the hand could be applied; indeed, the spider monkeys are said to use this member for hooking out objects where the hand could not be inserted. In this manner they often rob nests of birds, who thought that they had laid their eggs safe from all danger. The tail is also of considerable use in climbing among the branches of trees; they coil it around the limbs to lower or raise themselves, and often will suspend themselves entirely by it, and then by a powerful impetus swing up to some distant branch. The habits of all the spider monkeys are very similar. They are extremely sensitive to cold and when chilly are in the habit of wrapping their tail about them, so that this useful organ answers the purpose of a useful organ as well as a hand. They will also, when shot, fasten their tail so firmly to the branches that they remain suspended after death. The great length of their tail enables them to walk in the erect attitude better than most monkeys. In walking they cast their tails upwards as high as their shoulders and then bend it over so as to form a counterbalance against the weight of the body which is thrown very much forward, and that most other animals. The genus is called atea, or imperfect, because in most of the species the thumb is wanting. The coaita inhabits Surinam and Guiana.

Reflective use of a Woman's Hair.

A double-faced woman is not singular.

It's not always the man's clothing that makes the woman.

The greatest hypnotists on earth are women. Hypnotists are fakes.

Love is the highest form of imagination. Women are imaginative beings.

There is no power on earth that can refuse a woman's lips—properly applied.

Trust a woman for everything. All credit establishments eventually go broke.

The recording angel never marks down what a woman says of her rival's photograph.

I have never seen a woman who would not lie. All the dead people I've seen were men.

Only a few women will have cause to complain of "having nothing to wear," when entering the golden gates.

When a man goes to Hades he will wish he was a woman; then he could jolly His Satanic Majesty for ice cream.

The only time a wife finds a hair on her husband's sleeve and does not accuse him of infidelity, is when the hair is grey.

In referring to feminine blondes never call them "fair-haired goddesses," as goddesses are unnatural. So are most blondes.

When men are happy they want to be with women, who destroy that happiness; and still they want to be with them. Men are fools by association.

At sixteen a girl enjoys being kissed for the pleasure of it; at twenty she still enjoys it, but dotes ever being kissed; at twenty-five she begins kissing young boys "just for fun," and at thirty she will kiss any old thing that offers itself for the sacrifice.

A Church Nursery.

The Broadway Chapel of the First Baptist Church, Fall River, Mass., has a church nursery. The infant class rooms are arranged so that by opening sliding doors they can be used as a gallery, and here the nursery is established. In one room the sliding doors are open, so that the mothers who wish to stay with their babies can nurse them without being seen, and at the same time see and hear all the service. In the adjoining room the babies whose mothers are willing to leave them are kept and cared for by the attendants. In this room are small tables and chairs and playthings, such as used in the kindergartens.

The chapel is situated among the cotton mills, and many of the mothers would be unable to come at all were it not for this provision.

The idea is becoming quite popular in various localities, and when its utility is once understood it will no doubt be widely adopted. The expense is nominal, the machinery is simple and the results are obvious.—Church Economist (New York City).

Copper in Nevada.

That there is a possibility of Battle Mountain, Nev., developing into a great copper producing locality was again demonstrated last week, at which time there was put on exhibition copper ore of a quality that is unsurpassed, even by that of the famous Calumet and Hecla, which has afforded dividends amounting to over \$49,000,000.

The Bicycle Ear.

An eminent Italian physician, curious to observe the effect of fatigue on cyclists, recently examined twenty-four men who had ridden thirty-two miles in two hours and a quarter, and found that with reference to the hearing in nearly every instance it was defective, though it became normal again after two or three hours' rest.

Trolleys in Japan.

Japan is deteriorating. It has already three electric railroads and work on four other roads will begin about the middle of September. One of these will be an electric railway about fifty miles long, running through a number of small towns in the vicinity of Kobe. Current for the line will be generated by water power.

German Engineers.

Engine drivers in Germany receive from the Government a gold medal and \$1,000 for every ten years of service without accident.
