Microbes in Rum.
Milk drinkers having been scared sufficiently, the bacteriologists have turned upon the rum drinkers. Rum often has a disease known to the trade as "faultiness." This is due to a microbe that, according to the "Lance," "strictly speaking, does not flourish in alcohol, but in its own gaseous envelope, through the cells of which it first obtain its necessary supplies of food in the form of sugar while keeping out its enemy, alcohol." The rum micrococcus has been named provisionally "Coleothrix methystica." It has been injected into a guinea pig, with no apparent harm to the guinea pig.

Are Not**

A black and white photograph of a large, ornate building, likely a residence or office, with a prominent tree in the foreground. The building features multiple stories, arched windows, and a complex roofline. The tree in the foreground is tall and leafless, partially obscuring the building. The overall style is that of a vintage newspaper clipping.

modern artists. The music room at the rear of the drawing room has yellow hangings and yellow tints prevail in it generally.

Attorney General Griggs' house has something of the effect of a double house, the hall having a window. The hall and the staircase make a very ornamental feature and are lighted by a fine stained glass window at the top of the first landing. The drawing room is simple and is richly finished, light tints prevailing. The dining room is at the rear of the parlor suite, which, in size and elegance, affords splendid facilities for the comfortable moving about of a large gathering.

Postmaster General and Mrs. Smith

Mr. Telfair's scheme in a nutshell is this:—He will place two poles in the aeriferous ground, distant from each other ten miles, turn on a powerful current and then sit with a blamouflaged pouch or tank at the negative pole, while the positive pole is a low metal to make its appearance from the positive pole and drop precipitously into his receptacle. . . . Such a paltry detail as the too, to solid rock, which ordinarily requires a persistent and heroic drilling to insure, will not figure at all, as the current will be so powerful that its own tenuous grasp and hurried march along for miles through their adamantine bed, the golden current being augmented every minute until it becomes a raging, seething torrent which it emerges from the earth at the positive pole. The wonderful Telfair also warns his readers:

ity accumulation of \$600,000 in gold. Telfair is a Georgian and the promoter of a mining company with the modest capitalization of \$100,000. He calls his process an elaboration of the electrolysis idea. He is at present a resident of the county jail because, as he explains, he refused to pay a bill for \$15 worth of shoes a second time after he had once reimbursed the dealer.

It isn't the amount of the bill that Telfair objects to; it's the principle of the thing, he says.

tance of three and one-half miles, and returns, making seven miles. That makes twelve and one-half miles a ride every morning. In the afternoon he makes the same trips. After supper he goes to Allensville and returns home, making in all thirty miles a day. He does this every day in the year, making 11,280 miles a year. He travels at least 4,200 miles a year—fishing and hunting, making a grand total of 12,480 miles a year. He has done this steadily for twenty years, making in all 249,600 miles. He travels every two years a distance equal to the circumference of the earth. It is to be hoped that he has not adopted a straight course for the past twenty years, or he would have been around the world ten times. He is likely to keep this up for twenty years longer.

A Marvelous Escape.
Sandow slipped during the performance of his feat of holding up a pianist with the pianist at a Liverpool theatre, the result being the smashing of the piano, a week in bed for the pianist, but no harm to Sandow himself.

of North pole temperature. The correspondent makes this remark because he had had some arguments lately and wishes convey the impression that they are not a together distasteful to him—in winter.

Reverend J. M. Hustla, pastor of St. Mary's church, announces that a series of sermons will be given during Lent on the Sacraments and the Sacrifice of the Mass. These instructive lectures will no doubt attract large crowds on the evenings of which they are given. Father Hustla's ability as a convincing and eloquent speaker is well known and the Lenten lectures last year tested the seating capacity of St. Mary's church and compelled the attention and

Many come before us, but I can't meet them all. While we are slow to accept a word of criticism, when we are pleased us, we are quick to "reject" it. Someone that which displeases us in any way. These philosophical reflections have been formed upon the correspondence with him and he has been made to feel their truth in the course of his short newspaper career. Letters come from his readers occasionally and they are very full of "rockism." He has often been troubled with fear and trembling, but he has been in a more usual writing mood of apprehension. Perhaps they were in consideration of the fact that otherwise might get a "walled head." As it is, there is no danger of that, and in any event, it is always glad to hear from his public, although they—

"Always sit on him when they are mad and never think to tell him when they are glad."

The last dance of the season was held Monday evening at Gaild hall and was largely attended.

Deceased was thirty eight years of age. He is survived by three sons and one daughter, John and Frank of this place, Walter Rochester and Mrs. B. Palmer, of Stoughton. Mr. William Allen has returned to Lima, after a visit with his parents.

Country roads are now impassable at the recent storm.

SEIZES 15 BOMB BILLS
 NEW YORK, Jan. 2. - Federal agents today seized 15 bills for \$500 each, which they believe were part of a scheme to raise money for the purchase of bombs.

1. The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.
