lawn batiste, nainsook, and cambric, many of the summer styles of French make have short puffs for sleeveseven shorter than the elbow styles albeing gathered into the arm-scye, and tonhole before it is adjusted to skirt again into a band of insertion on the and belt. lower part. This band is edged with a fall or rather wide Valenciennes or Cuny lace matching that which elaborately decorates the bolero, jabot drapery, or other dainty accessory on the front of the gown.

The fronts of the walsts of many of the handsome tailor costumes of the season are made with triple-front edges shaped in various odd ways and formed of materials and colors artistically combined. A smart costume has a front edge of the dark-blue silk serge forming the jacket, overlying another inserted piece of black velvet. which in turn laps a second edge of damask red corded silk. This arrangement extends up the sides of the bolero and forms very novel and effective

lapels and turn-down collar. The vest is in tucked blouse style, and is made of cream-white Liberty satin dotted with red, the plaids stitched with silk of the same shade. The folded stock collar and slightly pointed girdle are trimmed with rows of narrow black velvet ribbon.

Retain the Glass.

It is claimed that the Mercerized Swiss muslins, batistes, duck, and other cotton weaves when laundered, will retain the silky gloss they show this season. In several known instances this has not proved the case, but in spite of this fact the new finish is an attractive and improving addition to many of the light summer fabrics. Very few of the lighter transparent grades of cotton, Swiss muslin, for instance, look as well after a visit to the laundry. With care a dressy gown of these inexpensive materials will last the summer season through—which in most cases is all that can be expected. They are not as economical a choice for every-day wear as the pretty zephyrs, chambrays, French Madras, pink and white mauve, and white ginghams and similar summer suitings, which appear really to improve in appearance after a skilled laundress has had them in hand.

Great Finishing Touch. The usual number of open-fronted fackets has caused a demand for underbodices of different kinds, and the season's varied styles include elaborate French gilest, English and Russian waistcoats, and Plain American vests. By a plain American vest is not meant anything at all commonplace or easily made. On the contrary, it is an article of ingenious and artistic workmanship. If the tailor has a hand in its creation, it is flawless in its fit, finish, and natty effect. If the tailor-modiste undertakes its build, it is very dainty. its foundation may be solid silk, but from collar to waist it radiates fairy trills and zephyr-like draperies. Soft chiffon folds are caught with glittering lace-pins; a costly buckle adorns the felt. Altogether it is the great onishing touch of the season's smartest gowns. A melange of velvet-ribbon straps, a jabot of rare lace, a glim-

empire or princesse garment, haif covered with heavy lace applique garni-

Very slight and gradual changes are being made in dress sleeves by all high-class modistes. The bell shapes with full undersieeves were the first concession. Then quickly followed all sorts of pretty conceist in the way of small vertical tucks, plaitings, and shirrings, tuset pieces of guipure, buffed and insertion-trimmed caps, and long, slender Vandykes formed of teric. This trimming surrounds the top and bottom of the sleeve, and on very ornate gowns also runs up the back of numerous pretty stripes and dots, with fine lace-trimmed nightdresses of linen | tuoise blue, red and soft daffodil yel-

A Yankee Invention.

Here is a Yankee with a fifteenent invention which he insists is as effective as a lifetime of wearing of French corsets in lengthening the waist at the front. The trinket is made from metal, is three or four nches long, half an inch wide and punctured in half a dozen places to allow of different adjustments, depending upon how much of an incline to the belt is desired. The invention has four claws two above two. The lower set holds down the skirt and the upper two fasten upon the belt lightly and "dip" it after the mode of the hour Hitherto, so say the promoters of the new fifteen-cent nice sity, women have sought in vain for a tru tworthy method of curving down the belt in front. Pins are unreliable and buttons useless. Nothing less than a natural curve, such as long wearing of French stays produces, or an inflexible piece of metal is sufficient. These waists lengtheners are being sold like ice cream soda by demonstrators in the department shops. I should think that these curios might, indeed, be good for keeping down the skirt and giving an appearance of length in front to the waist. They come in five, styles-gilt, silver, light and dark bronze and black. The disadvantage in the use of the toy is that a button- ders to stop at the way station, and hole should be worked in whatever he went back to the sleeper to inform bridge over a gully four miles out Mr. hole should be worked in whatever

On board were envoys from bombarded the Taku forts while the echo.—Washington Post. Russian and the Americans looked on. The Chinese made only a slight resistance. As soon as Taku was captured a force was landed from the assem-! foreigners were met by envoys from in the rear of which a steam boiler Pekin, who said they were willing to sign the proposed treaties. On April 14 the Russian treaty was signed, and four days later the American. The British treaty was not signed until June 16, and the treaty with France was signed the following day. In the British and French treaties it was stipuated that representatives of foreign Powers should be allowed to live in Pekin, additional ports were to be opened to trade, the Yang-Tse-Kiang was opened to navigation by foreign vessel, and an indemnity of \$5,500,000 was promised England. A smaller sum was promised to France. At the time that these treaties were being signed Dr. Churche's Steam Coach, Invented the Chinese troops in the neighborhood of Canton were conducting hostile the mouth of the Pelho river on their to gain popularity.

way to Pekin, that the forts of Taku drove back the British fleet and Tattnall made his "blood-is-thicker-thanwater" remark.

Their Artillery. What sort of forts constitute the de-

fenses of the Chinese Empire may be imagined from the report made recently by Lord Charles Beresford, which he embodied in his book "The Break-Up of China." He said. "By permission of the Vicerovs I visited forty of the forts and batteries which form the coast and river defense of the Chinese Empire. At all these forts I asked that the guns' crews might man the guns in order that their state of efficiency should be tested. The guns were laid and trained and some of them were fired. Some of the forts are immensely powerful, and a few guns' crews knew how to handle the guns. Physically, the garrison artillery throughout the empire are a splendid body of men. The forts are armed with every conceivable sort of gun: the modern forts with heavy modern breech-loading artillery of the best description. In one of the forts was a heavy battery of sixty-tone muszle-loading guns, which were loaded by depressing the muzzle into the magazine. I ventured to point out to the general the danger of this proceeding and the likelihood, through careless sponging, of the magazine blowing up. The general congratulated me on my acumen and immediately showed me where a magazine had exploded a year before from the same cause and had been rebuilt for a probable repetition of the accident, which had cost no less than forty-two lives. At another fort I asked to see the powder used in the heavy guns, and was shown some powder of Chinese manufacture. I suggested that such powder was not suitable and might burst the gun. The general in command replied 'Yes, it does we have lately blown the breech off two twelve-inch fifty-ton Krupp guns and killed and wounded thirty men.

In Tien-Tsin is a fell-equipped arsenal and in the arsenal a mint caplanation was curtly refused. Then, Close to the arsenal is a government powder factory. The Chinese Naval Having been reinforced by two other Academy is also located at Tien-Tsin.

Territory Secured. The principal cessions of territory by blue jackets and proceeded to storm. China to foreign powers are as folthe defenses. He had with his landing lows.
