PROMOTE GROWTH OF HAIR.
 Daily Massage and Vigorous Brushing Will Attain This End.
 One of the first great requisites in hair brushing is to see that the brush is perfectly clean, for it gathers impurities much faster than a comb. Thoroughly cleanse, wash in soap and water in which a tablespoonful of ammonia has been dissolved, or in ammonia and water, the same amount of the former to a quart of water.
 With a brush of good Russian bristles brush the hair with a regular, even stroke, the result being a stimulation much the same as massage. Next to the hair brushing, scalp massage is most effective in keeping and obtaining a good head of hair. When the scalp becomes adhered to the bones underneath and will not move easily, then the hair will come out. One should see that the scalp is perfectly flexible and loose so that the hair follicles will be kept in a healthy condition.
 This promotes a flow of blood to the root so that the hair follicles will be well nourished.
 Massage is such a simple thing to do and one can give the head five or ten minutes at night before retiring without feeling the time given up to it. Loosen the hair and place the tips of the fingers one hand at each side of the head, and work them in a circular motion toward the imaginary circle on the center of the head. The hair will respond at once and the head will feel lighter and better.
 Singeing the hair is also good to prevent its coming out, and is an aid in keeping it in a healthy condition. There is an old superstition that is "make the hair bleed," but that is absurd. It is better for a second party to aid in the operation. Take small strands of the hair and twist it tightly, running the taper up and down, singeing all loose ends. The idea is simply to singe the split ends of the hair just as one would cut or prune and unwholesome plant.

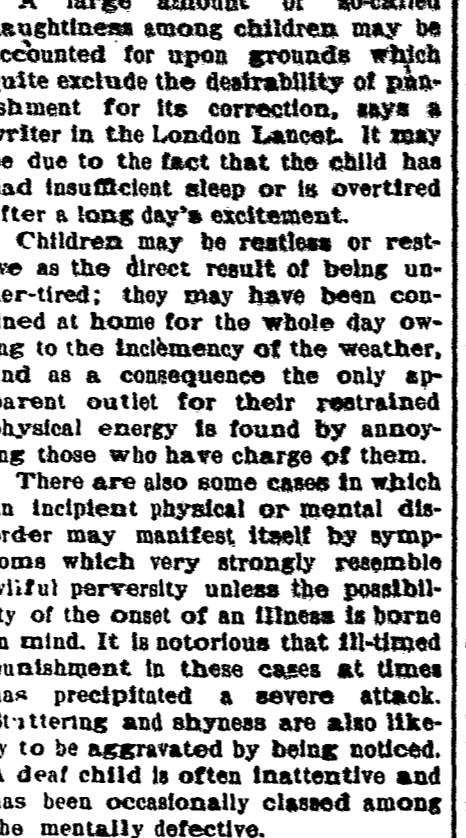

POINTED YOKE BLOUSE WAIST.
 To Be Made With or Without the Fitted Lining.
 Pointed yokes makes exceedingly attractive feature of many of the most charming of the season's blouses. This one is combined with a shirred lower portion, and is eminently graceful, and well adapted to the fashionable soft and crushable fabrics. As shown it is made of handkerchief linen with trimming of Valenciennes lace, but it can be utilized for such soft silks as radium, Adrea and the like, as well as for cotton and linen materials. A yoke of plain material, inset with medallions and insertion, as is this one is always attractive, but it can be cut from any all-over material if better liked.
 The waist consists of the yoke and the blouse portion, the blouse portion being shirred and joined to the yoke and the seam concealed by the trimming. The closing is made invisibly at the back. The sleeves can be either in elbow or full length and the lining can be used or omitted as material renders desirable.

FASHION'S MANDATE.
 Braces of material to match the skirt are worn with the corset skirt over the lingerie blouse.
 The girle is part of every costume and must be considered when one is considering the outfit. There are all kinds of girles, just as there are all kinds of boas and all kinds of slippers.
 Embroidered sleeves add one more rich touch to some of the new blouses. The design of the front is repeated, in a similar way, upon the back, and broken up and scattered all over the sleeves.
 To take the place of the shirt-waist dress a severe tailor suit of sajan silk is excellent. This should be of a shade that will not soil so quickly, but could be made so simply that it could readily be washed or cleaned.
 The circular skirt cut straight at sides and with a seam up the middle front is the one least likely to sag or draw and is being generally adopted for the linen walking skirt.
 Men's gloves are exceptions to the rule of mending with cotton. They are heavier, as a rule, and almost invariably stitched with silk, which should be used for the necessary mending so as to show as little difference between old and new parts as possible.
 The softest road is not always the best road. It is on the smooth ice we slip; a rough path is usually safer for our feet.—Home Notes.

HOUSEHOLD SUGGESTIONS.
 Corks can be made sound and airtight by boiling.
 Gum camphor placed in drawers or trunks will keep away mice.
 A cloth moistened in alcohol is the best medium for cleaning the keys of a piano.
 When chopping suet sprinkle with ground rice and it will not stick to your knife.
 A flannel dipped in paraffin will clean windows satisfactorily if you use a clean duster to polish the glass.
 Suet that has become hard and stale may be freshened by placing in boiling water for a few moments.
 Grease spots on silks can be removed by spitting a card and rubbing the spots with the soft inner part of the card.
 The white of egg rubbed on the bottom crust of pie will prevent the juice from the fruit soaking through.
 If you wish to keep soap for several days, allow the coating of fat which will rise when cooled to remain on the top. This renders the liquid airtight.
 Silver that is in daily use may be kept bright without continual polishing if allowed to stand for an hour in hot borax water. Rinse with clear hot water and polish with a linen towel.
 Pretty Floor Covering.
 Figured denims have proved wonderfully satisfactory for making all sorts of inexpensive furnishings, the newest use of all being for a floor covering. The discovery was an outcome of necessity, as so many household discoveries are.
 There was a little room which was carpeted with one of those utter monstrosities, in which cabbage roses of a violent pink were blooming only too luxuriantly. The little woman who inhabited it was driven to despair every time she looked at it—and finally to invention.
 She took plain blue denim and made a rug of it, finishing it with a wide border of figured denim—the same shade of blue for a foundation, with the weave shifted to throw the lighter threads to the surface, here and there, in set figures.
 Tacked into place, which meant over that carpet, it changed the whole character of the room.

WHY CHILDREN APPEAR "BAD."
 Often Result of Close Atmosphere or Insufficient Sleep.
 A large amount of so-called naughtiness among children may be accounted for upon grounds which quite exclude the desirability of punishment for its correction, says a writer in the London Lancet. It may be due to the fact that the child has had insufficient sleep or is overtired after a long day's excitement.
 Children may be restless or restive as the direct result of being under-tired; they may have been confined at home for the whole day owing to the inclemency of the weather, and as a consequence the only apparent outlet for their restrained physical energy is found by annoying those who have charge of them.
 There are also some cases in which an incipient physical or mental disorder may manifest itself by symptoms which very strongly resemble wilful perversity unless the possibility of the onset of an illness is borne in mind. It is notorious that ill-timed punishment in these cases at times has precipitated a severe attack. Stuttering and shyness are also likely to be aggravated by being noticed. A deaf child is often inattentive and has been occasionally classed among the mentally defective.
 It has been said that many children are punished for the faults of their teachers; this is undoubtedly true when such faults exhibit themselves as a continually close atmosphere in the schoolroom or a prolonged strained and cramped attitude of the pupil's body while he is seated at work. Frequently periods of exercise in the open air are essential in order to arouse the circulation and to stimulate the mind, if a mischievous disposition is to be combated.
 Lessons Labor in Preserving.
 Putting up preserves is a housewifely operation that has been simplified in recent years by the introduction of labor saving devices of which a practical example is here pictured. Its mission is to assist in

Rugs Just From the Mill

ONLY the middle of May, yet we are ready to show you rugs bought for our fall trade. Do not understand us to state that our fall stock is already in—this early shipment is but a small, although a very interesting, part of it. It is our custom to give the public the benefit of advance displays and housewives who have, from choice or necessity, delayed their rug purchases this spring now find good fortune awaiting them in the shape of an opportunity to select from patterns that were not intended for the retail market for three or four months to come. The weaves are Wilton, Velvet, Axminster and Brussels—all in the famous Howe & Rogers qualities, all of beautiful design, delightful in color effect and, because purchased in very large quantities, priced surprisingly low.
 We cordially invite those who have yet to buy their rugs to take advantage of our exhibit of fall goods in connection with the still complete spring line.

Ingrain Carpets Our Hobby

IT has been said that our attention to ingrain carpets amounts to a positive hobby. We admit it. The ingrain has always been the favorite of ours for the reason that it is pre-eminently the carpet of the masses. We have watched with interest its development from the sturdy, if not altogether lovely, floor-covering of the '50's to the equally reliable and much more attractive fabric of the present day, which we regard as worthy of our largest and most readily accessible carpet floor.
 Of course, there are poor ingrains, as there is poor merchandise of every kind, but none of them find a home here. Our standard of texture, dye and workmanship is a rigid one, and patterns and colors, being carefully picked out, are extremely choice. In fact, "a Howe & Rogers ingrain" is widely known as a carpet which compares favorably with many a more expensive weave in appearance, while giving a degree of service out of all proportion to its cost.

HOWE & ROGERS COMPANY

The Marriageable Age.
 In Austria a man and a woman are considered to be capable of conducting a home of their own from the age of 14—a fact which accounts in no small degree for the spirit of "child fatherhood of the man" so prevalent in Austria.
 In Germany the man must be 18 years of age; but the age of the bride-elect is left to popular discretion.
 In France the man must be 18 and the woman 15, while in Belgium the same standard prevails.
 In Spain the intending husband must have passed the fourteenth year and the woman her twelfth. These figures, in connection with the admitted poverty of Spain, socially considered, are full of the deepest meaning.
 In Greece the man must have seen at least fourteen summers and the woman twelve.
 In Portugal a boy of 14 is considered marriageable, and a woman of 12.
 In Russia and Saxony they are a little more sensible, for in both countries a youth must refrain from matrimony till he can count eighteen years, and the woman till she can count sixteen.
 In Switzerland the men, from the age of 14, and the women from the age of 12, are allowed to marry.
 In Turkey any youth and maiden who can walk properly, and understand the necessary religious services, are allowed to be united for life.
 To go further afield, mere children of 10, 9, and even 8 years of age are, by Indian custom, often married. This applies to the girl only, although native boys from 12 to 14 become husbands, and the nominal heads of households.
 In China, too, the custom is nearly as senseless, boys and girls who ought rather to be on the school bench, or playing battledore and shuttlecock, set up their family gods and start upon their own.
 It is curious to note that the "marriageable age" standard increases in cold or temperate latitudes, and that the lowest point is touched in tropic latitudes. Lack of civilization also having much to do with it.
