ricane Have Net Been Successful in Home Raising.

"It is impossible to express as Opinion of values as to why American experiments in the manufacture of colong tean have so far been of doubtful seuccess," says former Consul Anderson. "In the manufacture of tee so much depends upon little things which affect the exact chemical or physical condition of the leaf that

the American fields than to any great difference in the plants themselves. The leaf is handled less expeditiously in Formosa than it seems to be in the United States.

"When delivered by the pickers to the curing house the leaves are spread out in open air, in the sunshine if possible, on a bamboo mat or in low bamboo trays, and are there stirred every five or seven minutes, until the leaves are somewhat wilted, the edges pliable and signs of fermentation are visible. The length of time required for this depends upon the sun, temperature and similar conditions. The. tea is placed in bamboo trays, about four pounds in a tray, which are placed in a rack, one above the other, with enough space between to permit free circulation of air and to enable the workmen to manipulate the leaves.

"The leaves are stirned up in these trays at intervals of from seven to: twelve minutes, as required, the formentation being regulated and kept as even as possible in this manner. Fermentation ordinarily is allowed to proceed for about two hours, after which a rack of tea, about forty pounds of leaf as a rule, is turned into a large circular bamboo tray and is again stirred and manipulated for two hours more, at the end of which, time the edges of the leaf are somewhat dry, reddish brown in color and with considerable of the odor of prevared tea.

"The leaf is then taken in dots of four or five pounds and placed in metal fring pans over charcoal free hot enough to wilt and curl the leaf, not enough to wilt and curl the leaf, giving it the seft, spongekke, quality of damp tea leaves and enabling it to be rolled, this firing or wilting geing accompanied by rapid stirring and accompanied by rapid stirring and Arthur and Isu Shima, all the in- the Statks of sweet corn might be lot of tea is then turned into a round place within sight of the yoast.
