GREATER ONTARIO BEACH

New Buildings for Numberless Attractions Being Erected

A large force of men are engaged at Ontario Beach Park in carrying out the plans of Architect Herbert L. Messmore to make this place the most popular pleasure resort the coming season.

A glance at the grand entrance to the park which is in place and fast nearing completion, shows that Mr. Messmore has brought to the project a ripe experience, gained by his connection with similar enterprises in the larger cities. Two massive pillars built on obelisk lines flank the gateway, which has been removed to the southern edge of the grounds so that the larger space may be acquired for the trolley terminal. Surmounting these pillars are mammoth globes in turn capped by spires.

Inside the grounds near the old ferry, extending westerly and parallel with the pier to the water's edge, the ground work of the scenic railway has been extended for 700 feet and the trip will consist of two rapid circuits overhead, and then a slow passage through the tunnel, which will be replete with scenic effects. The cost of this attraction is said to be \$45,000.

On the western side of the grounds have been erected the grand stands for the "Fire and Flames" spectacle. The "House that Jack Built" is on the eastern side of the park and is a structure erected on distinctly original lines. Among the other features it will contain Dante's Inferno, "The Trip to the North Pole," "Spook Room," "House of Trouble," "Katzenjammer Castle," "Cave of the Winds," "Magnetic Chamber," and the "Temple of Mysteries".

A score of lesser attractions have been provided for, and great headway has been made on the booths and other buildings in which the concessions will be located.

The New York agents have booked a number of European acts which will be given upon the plots facing the hotel, and arrangements have been perfected for daily band concerts. Prominent among these may be mentioned the "Killies" and the Marine Band from the National Capital.

Cook Opera House.

The Colonial Septette, an organization of young men and women, attired in picturesque colonial costumes, and backgrounded by pretty stage settings, is to be the main attraction in the bill of vaudeville announced for presentation next week at the Cook Opera House. About the only comedy bicycle act left in the business now is that of Mosher, Houghton and Mosher. This trio will be remembered as presenting a series of feats of fancy riding surpassed by no other bicycle turn in vaudeville. German comedians there are in plenty - but it is safe to say that there are not any more cordially liked than Rice Tom Hearn will present what is said to be a mighty novel offering, combining fun with good juggling tricks. Donahue and Nichols will have a singing and dancing turn in which they will present the sort of work that made them so popular in musical comedy. Louisa Raffin will show a troupe of trained monkeys. Pongo and Leo will have an acrobatic turn; the Musical Johnsons will do stunts, and the Kinotograph will show new motion pictures.

Baker Theater.

Charles E. Blaney's powerful melodrama, "The Factory Girl" will hold the boards at the Baker Theater beginning Monday afternoon, April 22. Foster and his Little Dog, one of the strongest acts on the vaudeville stage, will be the headliner among the specialties. S. C. Mendels will sing illustrated songs and moving pictures will be shown between the acts. There will be no performance on Wednesday evening, April 24, but an extra matinee will be given on Thursday, the 25th. For the week beginning Monday afternoon, April 29, Grattan Donnelly's great drama, "In Darkest Russia," will be presented by the Baker Stock Company.

Stop! Don't take imitation celery teas when you ask for Celery King, a medicine of great value. The "teas" are urged upon you because they are bought cheap. Never jeopardize your health in a bad cause. Celery King only costs 25 cents and it never disappoints.

INDICATES SPEED OF TRAINS

Railroad Device Invented and Used in France.

One of the French railroads uses a novel form of speed indicator for its locomotives in cases where on account of repairs, defective structure, or lack of attendance the speed is to be kept within a certain limit. It not only shows the speed, but when this rises above the required point it acts automatically to throw on the air brakes. One of the locomotive axles drives a small centrifugal pump which sends water from the tender against the compression of a spring, and moves up and down according to the speed of the pump or of the locomotive.

The piston is connected with a registered apparatus which thus traces a speed curve. When the speed rises above the limit the piston acts upon a device which is connected with the air brake pipes, and a certain quantity of air is allowed to escape, thus throwing on the brakes.

Safe Gasoline Stove.

A Texas man has devised a gasoline stove which he claims is absolutely non-explosive. The reservoir may be covered with oil and set afire with impunity. The stove is constructed with two tanks, one to hold water, the other gasoline. The piping is so arranged that the gasoline reservoir is always full, the pressure beneath the water forcing the oil to the top and thence into the burner. So long as the air is thus excluded from the gasoline reservoir the tank cannot explode.

Lakes of Borax.

Near Ashcroft, in British Columbia, are a number of small lakes, whose shores and bottoms are covered with a crust containing borax and soda in such quantities and proportions that when cut out it serves as a washing compound. The crust is cut into blocks and handled in the same manner as ice, and it is estimated that one of the lakes contains 20,000 tons of this material.

Great Candy Eaters.

There are no greater candy eaters in the world than the very poor people of New York City. Keepers of the street innumerable little shops in their neighborhoods say that thousands of them will go without proper food to buy sweets, and that they spend ten times as much for sugars and chocolates, in proportion to their means, as do those who can well afford such luxuries.

Scotch Boy Whipped King Edward.

King Edward, like many another sensible man, occasionally takes great pleasure in telling a joke on himself. This is his favorite:

Queen Victoria while in Scotland during the boyhood of Edward was fond of taking her easel to the coast or to the river and spending long hours over her water colors. The little Prince of Wales usually accompanied her. On one of these occasions he found time rather heavy and cast around for something with which to amuse himself. Near by he espied a barefooted, killed Highland boy of his own age building a sand castle. Edward went up to him and calmly kicked the castle over.

"Dinna do that again," said the boy.

He rebuilt his castle of sand, and once again it collapsed before young Edward's royal foot.

"If ye dae that again--"

There was silence as he built the castle for the third time.

Out shot the royal foot once more. The next moment his Royal Highness, the future King of England, was rolling in the sand with the infuriated Scotch boy, whose fists were flying like a windmill.

Edward howled for help, but Queen Victoria, who was an interested witness, sat still and allowed the killed lad to administer punishment to his heart's content. When the Prince eventually reached his mother's side nose bleeding and bedraggled, the Queen only remarked:

"You deserved that."

Radium to Illuminate Gun Sights.

The discovery of the latest use to which radium can be put - the illumination of gun sights, and the like, at night time - seems to indicate that it will play an important part in warfare.

In gun sights, levelling instruments and telescopes there is what is called a "fiducial" mark, which is used to obtain a faithful result. These marks, of course, are useless in the dark, and though many ways of illuminating them have been tried, nothing has proved satisfactory.

Mr. Andrew A. Common of Easton, Wis., was the first to attempt to solve the difficulty by the use of radium, and his experiments were so successful that he applied for a patent. Unfortunately, he did not live to have it granted, but the complete specifications submitted by Mrs. Common, his widow and executrix, have just been accepted. - London Daily Mail.

What Korea's King Can Do.

Only the king of Korea may rear goats, or have round columns and square rafters to his house, or wear a coat of brilliant red. Only the king may look upon the faces of the queen's hundreds of attendant ladies, or have any building outside of which there are more than three steps. Four steps would be high treason, and would cost their owner a traitor's death.

NOVEL DAIRY COMPETITION.

Effective Device to Keep Contestants Up to the Mark.

A very ingenious and sensible form of dairy competition is fostered by the Department of Agriculture for Ireland, by means of which it is possible to keep the competitors up to the maximum pitch of efficiency at all times, and which avoids the too frequent practice of contestants preparing something extraordinarily fine as an exhibit and which, though representing their best efforts, does not bear any relation to the product currently furnished the consumer. This is attained simply by arranging impromptu competitions, notices of which are sent out on the morning of the day on which the exhibits are to be held. For instance, the butter exhibitors are unaware of the dates and constant daily attention must be given the work in order to qualify at a moment's notice.

Frenchmen in Office.

The Frenchman of the middle class sacrifices everything in order to obtain for his children some official position or other, a mean one, perhaps, but a sure one, leading after thirty years of penury to a pension verging on destitution. This is one aspect of the decay of the French race. It is easy to understand that two races are not evenly armed for the struggle for life if one be made up of aspirants to official positions and the other of individuals possessing initiative daring and energy. For this reason do Latin races decline, while Anglo-Saxon races grow and multiply.

Muscular Power of Fish.

The most prodigious power of muscle is exhibited by fish. The whale moves with a velocity through a dense medium of water that would carry him, if continued, round the world in something less than a fortnight, and a swordfish has been known to strike his "sword" through the oak plank of a ship.

Individual Communion Cups.

The latest design of individual communion cup sets includes a chalice provided at its bottom with a multiplicity of spouts by which it is possible to fill several dozen cups in one operation by simply placing them in a tray which contains a separate ring or holder for each cup.

Beginning of Wireless.

No doubt the invention of wireless telegraphy was foreshadowed by a book of philosophy which appeared in 1611. This work mentions communication between two persons at different points by means of a lodestone and a needle placed upon a metal dial.

The Clergyman's Hat.

The English Episcopal clergy are discarding the old soft felt hat they have worn so long, and are adopting a stiff one made of smooth black felt, shaped like the straw-top hats, that is called in England a "boater." The new hat is said to be "smart and yet sober."

Manufacturing Wire.

The tantalum wire used in commerce, largely for electric lighting, is drawn through diamond points to an extreme state of fineness. This is, perhaps, one of the most remarkable characteristics of the metal, more especially when its hardness is considered.

Suction Gas Plants.

Suction gas plants are being introduced on the Bolivian tablelands, says a British consular report. The fuel problem there is a serious one, and these suction gas plants are being used in Bolivian mines with anthracite for fuel as the most economical power.

About the Snake's Jaw.

The jaw of the snake is supplied with what might be termed a double hinge, which permits the reptile when occasion demands to greatly increase its capacity, and permits of its swallowing astonishingly large bodies.

Habits of the "Air Hog."

The "air hog," the balloonist who, with dragging anchor, or otherwise, does damage to windows, hothouses, fences, etc., and does not pay up, is causing trouble in England, and it is proposed to number balloons for their identification.

Deaths Among Cigar Makers.

Among the cigarmakers 51 per cent died of tuberculosis prior to the inauguration of the eight-hour workday. Seventeen years after the eight-hour day took effect this percentage had been reduced to 23 per cent.

Coat of Patches.

A cento is a coat made of patches. In literature it is a poem made up of lines or passages from different authors and put together so as to make a new poem with a new meaning of its own.

Germany Leads in Chemicals.

Germany leads the world in the production of chemicals. The total output for the year amounts to \$357,000,000. This includes a million tons of sulphuric acid and half a million tons of soda.

Many Languages.

Of languages which so widely differ among themselves as to be incomprehensible without particular study the number readily exceeds 1,000.

CANANDAIGUA.

Prayers were offered Sunday for Mrs. Morris Lawton of Honeoye Falls and for Mrs. Foleschi's mother who died recently in Ireland.

The Young Defenders will receive Holy Communion next Sunday. Masses were chanted Monday for Mrs. Mary Kavney and Mrs. Harrington and on Tuesday for Mrs. Ann Daffey.

The C. M. B. A. made a splendid showing last Sunday filling the large new altar railing twice as they went to Holy Communion. Baptized last Sunday Edward William Finnerty and Salvatore Fardella.

Married last Sunday Antonino Ceravolo and Angela Vallalunga.

The cards distributed a week ago to determine the matter of a new rectory, were collected last Sunday. Of 174 cards received, all were in favor of proceeding this year with the work except eleven, who thought it would be wiser to wait a year or more till the debt of the new church was further reduced. Ten of the parishioners favored the purchase of the Backus property if it could be obtained for a reasonable price, and a few did not think that \$20,000, the price actually asked, would be extravagant for the large lot and all the buildings. The cards proposed a brick building but about fifteen in their remarks at the bottom of cards, expressed a preference for Medina stone so the house would match the church. A few thought it wise to build well back from the street. The vote in favor of the continuance of the monthly subscription was unanimous except one who thought it well to try an assessment. The S. M. T. ladies served a very delicious supper at Bemis Hall Tuesday evening and a large number of people enjoyed the very creditable entertainment given by Mrs. Henry Kelly and Messrs. Powers, Higgins, Burke, Scantlin and Williams.

Next Sunday is the monthly communion day of the Rosary, Altar and Scapular Society. Next Sunday the L. C. B. A. will receive holy communion in a body at St. Mary's church for a deceased member, Mrs. Ella Rowan. (On Monday Rev. Father Dunn celebrated requiem high mass for Michael Burke. The Easter collection at St. Patrick's amounted to \$214, the school collection for March to \$51. The Rosary Sewing Circle of St. Patrick's church are to be congratulated on the grand success of the card party and apron sale held at O'Connell Hall, April 10, the net proceeds will nearly reach \$50. Chas. Muldoon and Miss Emma Kerschner were married at St. Mary's church Wednesday morning.

Dansville.

The Celtic Circle met with its president, James M. Brogan last Sunday evening. Programme - Quotations from Irish writers; reading of Joyce's Irish History from 1625 to 1641. Sketch of Owen Roe O'Neill and the battle of Bebbury; Miss Elizabeth V. Maloney; reading, In Felix, Felix, William F. Kelly; reading, the Rapparees, James M. Brogan; current topics, members.

Miss Margaret Goodwin returns to her position in Canandaigua this week.

Miss Mary A. Dunn goes to Albany this week to visit her sister, Mrs. John D. Moriarity of 225, State Street.

Dansville friends of Rev. James T. Dougherty have received handsome colored post cards of the magnificent new St. Mary's church at Canandaigua.

School Commissioner Cranmer conducted teacher's examinations at the Dansville High School, April 11 and 12. Mr. Cranmer is an unusually energetic commissioner doing everything for the betterment of the public schools and teachers under his supervision.

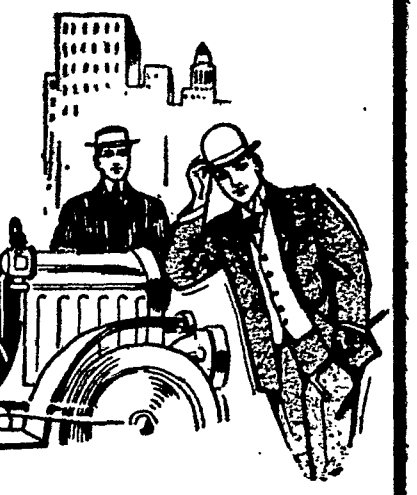

John Rauber has a position as clerk with the W. A. Spinning Co. Misses Clara Foley and Fanny Bacon have returned from a delightful trip to New York.
