Woman's World

Home & Foreign and Domestic & Special. She is Also a Writer.

ROMANIAN QUEEN OF ROMANIA, CARMEN SYLVA

Carmen Sylva is one of the few poets of the Balkans, and the most talented writer of fairy tales. She embroiders, paints miniatures on ivory, is a fine musician, having been a pupil of Brahms and Mrs. Clara Schumann, a brilliant conversationalist, an accomplished linguist, speaking fluently six languages and understanding as many more.

Founding schools, open houses, hospitals and asylums for the blind, supporting the peasant women to embroider, a liberal patron of the arts, an architect and adviser of a nation, the queen of Romania has known no rest in her reign of thirty-five years. All her revenues, except those required for necessities, even the large sums received from the work of her versatile pen, are devoted to charities.

She has always given all she had for the glory and benefit of Romania. Is it any wonder that throughout the kingdom her subjects call her the "Mother Queen"? She has given herself completely to another country, and then forgotten the girl, for how a queen of northern blood, born in another land, can be so devoted to an adopted people is a mystery. Yet she loves Romania more than her fatherland.

And her noble countenance reveals all that she has accomplished. Endowed with a commanding presence, a face which wears an indescribable smile of sweetness, and with large expressive gray eyes, Elizabeth (Carmen Sylva) is the ideal of a majestic queen. She was born Princess of Wied December, 1845, and was crowned queen of Romania, the beloved consort of the late King Charles.

How to Clean Your Spots.

Linens spots have largely superseded the vogue of cloth, as is quite proper for warm weather wear. They may be laundered without endangering their whiteness by too great shrinkage if ordinary care is taken. Some women have discovered that the best way is to put them over a shoe form and to scrub them with white soapuds applied with a stiff hand brush.

Naphtha is all right for the first or second cleaning, but water and soap will be found, eventually to improve the color and be the easiest way of freshening up the spots. Even the white cloth overgarters yield to the cleanly influence of water and soap, and a good laundress will be able to launder them well.

Spots of tan and checked lines are among the novelties, but as summer approaches we shall likely find the history of color taking the place of the overgarter. Nevertheless for the smart tailleur complexion women will cling to the shoe accessories which originally came to us by way of England and were formerly associated only with men's footwear.

Did You Ever—

Save old socks and stockings, sew them together for scrub-cloths, stove polishers, mop rags, etc.?
Save candy jars, label and fill them with different spices and keep them in a neat row on the cupboard or pantry shelf?
Make a tin sheet to fit the oven on which to roll out and bake cookies without handling? They keep their shape better, and it is much less labor.
Sew tapes to each corner of the baby's quilt, so he can't kick it off?
Hang a fire cut slate on the inside of the cupboard door on which to list down items liable to be forgotten?
Put a clean marble in a pot of vegetables to keep them from scorching? The heat keeps the marble rolling around.

Cut the opposite sides of a dress separately when the goods is the same on both sides? It often saves from one-half to a yard of goods.

A Good Window Cleaner.

A bag filled with powdered pumice stone is an excellent window cleaner. Make the bag of unbleached cotton cloth of a soft quality, not too firm. When finished the bag is six inches wide and twelve inches long. Into this put about one-eighth of a pound of pumice stone. To prevent soiling this bag it is slipped into a cheesecloth case that can be removed and washed. No water is used on the window, but it is rubbed first with a piece of heavy paper, then polished with the bag.

Care of the Baby In Summer

Presented by the American Society of Hygiene, Inc.

The summer months are critical ones for the baby, for an account of the heat is in more nearly upon. The mother in the country needs especially to see every detail in her power to keep the baby well during this trying time, as it is often very difficult for her to get the advice of a physician.

There are few women who cannot nurse their babies if they are properly taken care of before the baby is born, and at the time of birth. Most mothers improve in health while nursing the baby if they are well fed and do not have to work too hard, and then the mother knows that this also is giving her baby pure milk, fresh milk, milk of the same temperature, and start to think of the feeding and make important, a milk made especially for and especially adapted to the needs of that particular baby.

Put the baby in the breast and learn after he is born if the mother is sufficiently rested by that time and let her nurse him every six hours until the true milk "comes" usually on the third day. Thereafter nurse the baby every three hours by the clock and so on.

If a breast-fed baby gets summer diarrhea it is generally because he has been overfed, and people are beginning to find out that babies thrive better if they are fed only once in three or four hours so that the stomach may have a chance to rest between meals. Between feedings give the baby a little water to drink, having first boiled and cooled it. At four months the night feeding should be omitted, and at six months the mother should begin to lengthen the time of feeding a quarter of an hour each week until the baby is fed only once in four hours, with an eight-hour interval.

On the three-hour plan the baby may be nursed at 6 and 10 a. m., at 12 noon and at 3, 6 and 9 p. m., with one feeding during the night. On the four-hour plan the nursing will come at 6 and 10 a. m., at 2, 6 and 10 p. m. The baby needs no other food than breast milk and water.

How to Make Attractive Articles Out of Discarded Things.

If you have an empty half-pound candy box you can make excellent use of the cover and the box for its tray. Line both of them inside and out and finish the outer rim with wool. The cover should then be divided off into compartments. It is this sort of thing that makes a box of discarded things into a useful article.

Washer and Miter.

For little girls of about ten or twelve. In some cases the mother may not have enough milk to feed the baby, and she may give one or more bottles of milk a day in addition. Later articles will give directions for this kind of feeding as well as for weaning and artificial feeding.

The nursing mother should have plenty of simple, nourishing food. She should eat what she likes, provided her food comes her no indigestion, for if the mother is well the baby will usually be well. But if the mother has headaches or gets no stomach of bowels or has a coated tongue these symptoms show that she is not properly disposing her food, and she should try to find out what is causing the trouble. Fat, greasy and fried foods, such as doughnuts, pancakes, fried potatoes, baked beans, pie, heavy puddings and turnings and indigestibly cooked steaks, are among the foods that may cause indigestion. Fresh, well-cooked vegetables, good soups, bread and butter, milk, eggs, meat, fish, poultry and fruits should form the principal part of the diet of a nursing mother. She should take plenty of time to eat her meals and should chew her food well. All good food is milk-making food. It is better to do without tea and coffee, unless the mother has always been accustomed to their use. If so she should cut down the amount to one cup of each drink per day. Cocoa may be used in moderation, but milk, both sweet and buttermilk, and plenty of cold, pure water are the best drinks for the nursing mother.

The nursing mother should have plenty of sleep at night and should learn to relax and rest whenever the baby nurses. As far as possible she should be relieved of the heaviest part of the household work.

The nursing mother should not suffer from constipation. Ripe, raw fruits and stewed rhubarb and prunes are laxative, as are also well-cooked oatmeal and other cereals.

The breast and nipples should be washed with warm water and good castile soap every night, rinsing and drying them carefully. After each nursing wash the nipples and dry them. This will keep them from getting sore. A few weeks before the baby is born the nipples should be washed in this way every night and covered with vaseline. An old soft bit of muslin or linen may be pinned inside the nightgown over the breast to protect it.

THE SUMMER DRESS

Very New and Attractive in Design. Made of the Latest Fabrics.

A HAPPY FEELING

This dress summer dress is of white silk combined with white net. The neckline is high with a long collar and long sleeves. The dress is very simple and elegant, with a high collar and long sleeves. The dress is very simple and elegant, with a high collar and long sleeves.
