DANES PLANNING WEST INDIES SALE

Recent Strike-Revives Agitation of Question.

THE recent strike of negroes i the Danish West Indies has reopened the old question of the sale of the islands to the United States, The general belief is that if the question of the sale comes up again in the Danish parliament it will receive a favorable majority in both houses, provided the United States offers a greater sum than that affered in 1902, about \$4,300,000, (1)

M. Hageman, the wealthiest planter in the Danish West Indies, has recently published a pamphlet on the situa tion from the point of view of the most influential Danish residents of the col ony. M. Hageman favors the sale. In the pumphlet he recognizes the efforts made by the Danes to improve conditions in the islands, but views their future under Danish rule pessimistically. He particularly points out that the population is decreasing alarmingly. Infant mortality, he says, is very high, having recently reached 63% per cent, and the sanitary conditions in the

lieved the sixteen inch gun was practi. In 1902 the United States came within cable for use on large naval vessels, an acc of getting the islands by pur

Danish West Indian islands.

The convention was rathled by the senate on Feb. 17, 1902. The treats was approved by the lower house of the Danish rigsday, but on Oct. 21. 1902 the landsthing, or upper house, declined to ratify it. It was intimated then that foreign influences were at work against the ratification of the treaty by the Danes

The Danish archipelago includes the islands of St. Thomas, St. Croix and St. John. The islands lie to the east of Porto Rico. They have both commerial and strategic value, especially since the completion of the Panama canal. The chief industry is the cultivation of sugar, and the trade is chiefly with Denmark and the United States. The inhabitants are mainly negroes, the Danish element being represented at most exclusively by the officials and their families. The chief language is a Spanish dialect, but English is generally spoken at the ports. The islands have an area of 142 square miles and a population of 32,786.

Undoubtedly the sanitary conditions of the islands would be improved under American rule, while the agricultural and other industries of the islands would be systematically developed. There is no doubt that we might in time make of this group of islands a possession nearly as valuable as Porto
