SCIENCE—INDUSTRY.

Artesian Wells Made to Pump.

The field men of the United States geological survey in their investigation of the ground water resources of the Virginia coastal plain have observed that the flows from many artesian wells in that region are utilized to drive hydraulic rams for the purpose of lifting the water to higher levels. Along the lower courses of the Potomac and Rappahannock and along the shores of the many bays that run back from Chesapeake bay above the James there are hundreds of artesian wells that supply a potential flow of beautiful clear water which is as a rule excellently adapted to all domestic uses and is largely utilized by the canning factories and other industries of the country. Through the pressure of the water from the wells is applied at the shore level the head diminishes so quickly with increase in elevation that no flow can be obtained a mile or two inland unless the shores where the water is most needed. One method of obtaining it at these higher levels is to use the force developed by the artesian flow to operate hydraulic rams which in turn raise the water to the heights desired along the hills above the river and points. This may be said that the artesian wells pump themselves.

HELPFUL HINTS FOR HOUSEWIVES

Lamp Wicks Cheaply Made From Old Felt Hats.

Lamp wicks may be made cheaply at home from an old soft felt hat. writes a correspondent of Popular Mechanics. The hat should first be brushed clean and the brim that ends by ironing it. The greatest number of wicks may be obtained if the hat is cut into halves with a pair of scissors and then cut into strips of the required size, as shown in the sketch. Soak the strips in kerosene for two hours, dry them out for a day if convenient and they are ready for use.

THE STORY OF A GLOBE TROTTER

A Maiden Strangely Met and Then Lost In Siberia.

I am a globe trotter. One day when I was tramping in Switzerland I met a young fellow who asked if I could direct him to Interlaken. I replied that I was going there and if he would join me I would show him the way. He did so, and we walked up together. His features were so comely like that had they not expressed a good deal of character I should have considered him effeminate. He said he was a student, but when I asked him at what university he studied he evaded the question, pretending not to have heard it. The distance to Interlaken was five miles, and before we reached the place he had without my effort on his part gained a singular acquaintance over me. I am a believer in transference of soul power, and I have attributed the young man's effect upon me to deep emotions that were at the time absorbing his whole existence. On reaching Interlaken we went to different hotels. I did not see him again during my stay there. When the car visited Paris several years ago, on the day of his entry I strode out to see the imperial cavalier. Turning from Rue Rivoli into the Place de la Concorde a figure hurried toward me, and as it passed I recognized the young man I had met in Switzerland. I shall never forget the expression on his face. I could not read what that expression reflected from the soul within, but the meeting had happened near the spot where the steamer met for forty five minutes and served it up on a platter and sign of terror. Some months later I was attending an evening party at Geneva, where I was introduced to a young girl, Mile Zabriskie, whose face the moment I saw it made me start. It was the counterpart of that of the young man I had met near Interlaken and afterward in Paris. "Monsieur, why do you look at me so?" she asked. "Mademoiselle," I replied, "I have met a young man who is your very image."

Heinie Groh, who guards third base for the Cincinnati Reds, is considered one of the best pitchers at that position in the big leagues. Groh was formerly with the New York Giants, but went with Herzog to Cincinnati in the 1915 season, upon an exchange for Loumie and Hans Loeb. Since joining the Reds, Heinie has played glib edged ball. Last season he finished fourth in the list of pitchers in the National League with a percentage of .908. He really headed the list, as he took part in 131 games, while of the three preceding him only one played as many as fifty five. He also shone at the bat finishing in twelfth position, with a mark of .300.

Cascara Bark Industry.
Thirty-six thousand pounds of cascara bark were cut on the Siskiyou National Forest in Oregon during the latter half of last year, according to the government's foresters. A steady demand for this bark, for medicinal purposes both in the United States and Europe is reported to exist. Before the war most of the exported product went to England and Germany. The bark industry in California about 1905, for many years, California had the production of bark exporting as much as 20,000 pounds in a single year. Now western Oregon and to a lesser degree western Washington are the chief sources of supply. The former exports bark to the United States, and the latter exports bark to Europe.

Billiard Prospects.
In the death of Fernin Cassagnol in New York there has been lost to billiards one of the few men and perhaps the only one who could force Willie Hoppe to the supreme test. While the French expert did not come to this country ostensibly to play the present world's champion, the prospect of a match with Hoppe was the underlying motive for his making the trip. That it was futile in accomplishing the real purpose is a cause of regret. Those who saw Cassagnol play were convinced of his skill and many were confident that he was able to capture the crown. Apparently the only hope for a player to match Hoppe in the course of the next year is to press the water and there is small chance that the men considered most competent will come here. The two best billiardists in Europe are Mortier and Adelman, the former a wealthy amateur and the latter a Hungarian now in Spain. Adelman has expressed a desire to come to the United States, but will probably not gratify the wish until after the close of the European war.

Holding Bricks on Roof.
Bricks and material for the reconstruction of a chimney may be safely and conveniently placed on a roof by using the frame shown in the sketch.

Electric Furnace Boat.
An electric furnace for the heat treatment of steel used in automobile construction has been introduced. Its method of producing uniform, dependable heat that is so urgently sought by automobile manufacturers is quite novel in principle, comparable to that of the well known Norst lamp. Both the floor and the dome covers of this furnace are of a refractory material which is practically non-conducting at ordinary temperatures. To start the furnace a current is passed through a bed of non-bid acid fluxes and heated sufficiently to heat the floor becomes a conductor and in turn heats the walls and in turn heats the dome. This is done by a rotating drum on a drive shaft which carries the entire furnace. It is stated by those who have tried the furnace that its use in the heat treatment of automobile parts promises to be extensively in the future.

Where the Mississippi Runs West.
One of the most recent additions to the great topographic atlas of the United States which the United States geological survey is constructing is the map of the area known as the Edling quadrangle, lying west of Rock Island, in Iowa and Illinois. This area which covers about 230 square miles is nearly bisected by the Mississippi river and runs by itself presents the "Tale of Two Rivers" in a somewhat strange juxtaposition. The river flows in a southerly direction through the area. The map shows the river in the north, the river in the south. The river in the north is the Mississippi, and the river in the south is the Missouri. The river in the north is the Mississippi, and the river in the south is the Missouri.

To Limit Lead Content in Paint.
The enactment of a law prohibiting the importation of lead or use of paint material containing more than one percent of its dry weight of lead is one of the principal recommendations of the French department committee appointed to investigate the danger of the use of paints containing lead to the health of persons engaged in painting buildings. This information is contained in a department of commerce report.

Jellied Salmon Salad.
Take one pint of canned salmon, drain and remove skin and bones. Chop finely and mix with one pint of mayonnaise, but a little stock or hot water. Cover the meat with rice and the buttered paper firmly over the mold. Steam the meat for forty five minutes. To serve it turn it on to a platter and garnish with tomato, white or cream sauce or chicken gravy. A small portion may be used for this dish in a mixture of children.

Stuffed Potatoes.
Choose medium sized potatoes, one pound. Wash, wash and wash. Take from oven and with a sharp knife cut off one end. Remove inside with a spoon being careful not to break the baked shell. Mash with a potato masher, add salt, butter and pepper to taste. Cream with a potato whip and smooth. Refill the potato shells but do not put the top on set on end to a pan, return to the oven and bake till browned.

Potatoes and Eggs.
Pure one-half dozen large sized potatoes and slice them fine. Put one tablespoonful of lard in a frying pan and put the potatoes in. Brown nicely and add one-half tablespoonful of salt. When done beat four eggs hard and add one and one-half cupfuls of milk and a very little pepper. Pour this mixture over the potatoes and put in the oven to bake until nicely brown.

Raisin Pie.
Take the pulp of raisins, washed and seeded, turn over them one quart of boiling water and boil until tender. Keep adding water so there will be about quart when done. Grate the rind of one lemon into a cupful of sugar, three tablespoonsful of flour and one egg. Mix well together, turn the raisins over the mixture stirring all the while. This makes three pies. Bake in double crusts as other pies.

Raisin Muffins.
Sift together two cupfuls of flour, two level teaspoonfuls of baking powder, one-half teaspoonful of salt and two level teaspoonfuls of sugar, add two level teaspoonfuls of soft butter, one well beaten egg, one cup of sweet milk and one cup of seed raisins. Pour into buttered muffin tins or loaf pans and bake in a hot oven for twenty minutes.

Chocolate Cups.
Make a cream by using one quart of milk, three ounces of white sugar, one ounce of salt. Boil with a quart of chocolate melted and take in just hard and chill thoroughly and just before serving whip a spoonful from the cream, piping with whipped cream.

Mint Sauce.
Nothing is more delicious to serve with lamb or mutton than mint sauce. This is made of two tablespoonfuls of very finely chopped young mint, one tablespoonful of powdered and sifted loaf sugar and six tablespoonfuls of vinegar. This mixture should be stirred until the sugar is dissolved.

"Monsieur, why do you look at me so?" she asked. "Mademoiselle," I replied, "I have met a young man who is your very image."

"Oh, dear! When shall I cease having to explain this matter? I have a twin brother. Doubtless it is he you have met. People are always confusing us."

"Was he at Interlaken a year ago?" "Let me see. Yes, I think he was. I am sure he was."

"And at Paris during the visit of the Emperor?" "Yes, he was there."

"He expressed a strong opinion as to the merits of the subject?" "I do not remember."

"I should like to see you, but my aunt is struggling with my poor eyes, for I begged to ask more about the mysterious matter."

"When I went home that night my aunt was in a whirl. Few people have come under a sudden dominion of children as I did and words are found quite to express or explain it to those who have not. I only know that I was in the verge of being madly in love. I met Mile Zabriskie several times during my stay in Geneva, passing rapidly from one stage of enrapturement to another. One afternoon I went to her house she was boarding, but I did not learn under whose patronage to keep an appointment with her to saunter on the banks of the blue Rhone. To my great astonishment, I was told that she had left Geneva. I was left to wonder where she was going or any message for me. I called at the house where I had first met her, and they told me that their acquaintance with her had been short and they could not, or would not, tell me how they had made up."

"It seemed to me that I must find her if my aunt was unobtainable, but having secured no clue, I did not know where to look for her. I visited different cities, going often to theaters and quart when done. Grate the rind of one lemon into a cupful of sugar, three tablespoonsful of flour and one egg. Mix well together, turn the raisins over the mixture stirring all the while. This makes three pies. Bake in double crusts as other pies."

"I learned from a revolutionist that Zabriskie was in a confined place in Paris to try to assassinate the Emperor. There was a man in the cell. The man was a woman for whom she had been exiled. She was waiting for the Emperor to be executed, but she had been exiled before she could see him. And now, after drawing on my bank account in America for the half of my fortune, I have secured permission to go to Siberia to examine into the conditions of the prisons there with the purpose of view to counteract the effect of the western world of unfavorable statements of others. All I ask is that I shall find the officials as ready to accept bribes as they are reported to be. If so I shall bring back my love to life and liberty."
