SCIENCE—INDUSTRY.

Standard Barrel Law.

The new federal law of barrels becomes effective July 1. This law specifies that barrels used in the sale of fruits and vegetables must contain 7,056 cubic inches, which means 105 quarts, or approximately three bushels. No dimensions of the barrels are specified, but they must hold the proper cubical contents. Fines of $500 or imprisonment for six months are penalties provided for violations of the law. Officials in New York and other markets are sending out notices that the new law will be strictly enforced. The standard barrel under the New York net weight container law need not be marked in terms of weight, measure or numerical count. Wherever a barrel is more or less than the capacity fixed by the law it must be marked in such terms.—Market Growers' Journal.

New Gasoline Process.

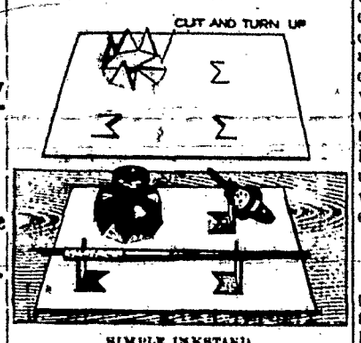
A patent on a process for the manufacture of gasoline by what the inventor calls a recomposition method has been granted to C. S. Palmer, Ph. D., a fellow in the Mellen Institute For Industrial Research of Pittsburgh. The Palmer process consists of extracting gasoline from petroleum residues which have practically no volatile matter below a temperature of 300 degrees C. When they are subjected to this temperature under conditions prescribed by the process about 75 per cent of their composition becomes volatile, and of this about 20 per cent is gasoline. The basis of the process is said to be the interrelated control of temperature, pressure and time, these factors being so applied that recomposition of the elements in the petroleum residue results, one of the recompounded products being gasoline.

Production of Bauxite.

The bauxite industry in the United States had a banner year in 1915. The production of bauxite was 297,041 long tons, valued at $1,514,834, an increase of 77,723 long tons, or 35 per cent in quantity, and of $445,640, or 41 per cent in value compared with 1914, according to a statement issued by the United States geological survey. This abnormally large increase in bauxite production is due to the greatly increased activity in the aluminum industry. The quantity of foreign bauxite used during the year was exceedingly small, for obvious reasons, and out of a total consumption of more than 300,000 tons only slightly more than 1 per cent was imported. Arkansas produced more than 90 per cent of the domestic production, and Georgia, Alabama and Tennessee contributed the remainder.

Inkstand Made of Paper.

Drawings are not infrequently ruined by the spilling of ink, which might have been averted by the use of the simple inkstand cut from a sheet of heavy paper, as shown in the sketch, says Popular Mechanics. The upper illustration



SIMPLE INKSTAND.

shows the method of cutting the paper to fit the ink bottle and stopper and to produce a pen-rack. The device will be found especially useful when materials for drawing are used away from a place especially fitted for the purpose, since the inkstand can be made in a few minutes from material readily available.

Output of Silica.

The silica (quartz) sold in 1915 for pottery, tile, glazes, paints, wood filler, wood polish, abrasive soaps, fine filters and other uses, as reported to the United States geological survey amounted to 243,340 short tons, valued at $1,270,835. This product was obtained from quartz veins, pegmatites, quartzites, sandstones, sand, tripoli and diatomaceous earth.

Checking a Rip in Tire Tubes.

It is often difficult to prevent a small rip in an inner tube of a tire from becoming longer, even though a patch has been applied, says Popular Mechanics. An effective remedy is to punch a small, round hole at each end of the rip before applying the patch. This stops the tendency to rip further when pressure is applied.

Belt Dressing.

About as good a belt dressing as can be had is made by melting beeswax in neat's foot oil in proportion of one-half pound of wax to one-half gallon of the oil. To secure a good mixture melt the wax first, then add the oil slowly, stirring constantly to get it thoroughly compounded.—Blacksmith and Wheelwright.

Fireproofing Wood.

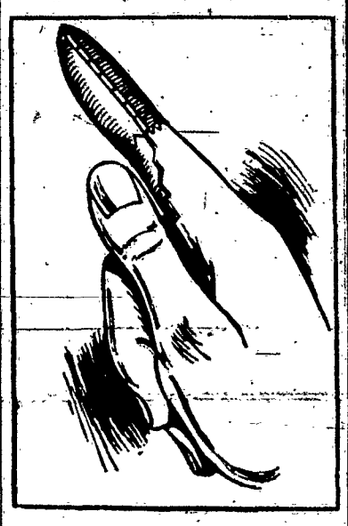
Interior woodwork may be made proof against ordinary flame by coating it with silicate of soda, known as water glass.

Cause of Blue Exhaust.

A blue exhaust indicates the burning of oil which has passed the piston rings and worked into the combustion chamber.

HINTS FOR THE BUSY HOUSEWIFE

Toothbrush Substitute, to Be Discarded After Use.



The tooth cleaner shown herewith is designed to take the place of the brush. It is claimed to be more sanitary because it may be discarded after use once or a limited number of times. The cleaner is made of fabric and shaped like a finger nail to fit over the end of the forefinger. One side of the device is, of course, open weave, which is permeable to tooth powder, which is contained in a tiny pocket back of the fabric. The other side is of closer material designed to rub the teeth with after an application of the powder has been made. Thus one side of the tooth cleaner carries the powder and after a few rubs with that side the finger is reversed and the cleansing proceeds with the other side. The under side of the tooth cleaner is supplied with an extension by which it may be held firmly in place on the finger while in use.

Cream of Onion Soup.

Allow for each person two medium sized onions, one teaspoonful of granulated tapioca, one cupful of milk and one or two tablespoonfuls of butter. Peel and slice the onions, cover with cold water and put on the stove. Bring to a boil and boil five minutes. Pour off water and drain and chop onion and put on to cook till tender in the frying pan with the butter. Cook gently for about five minutes, then add the milk and tapioca cold, the tapioca wet up first in a little milk, and cook and stir the whole for fifteen minutes over a small fire after the boiling point is reached.

Green Pea Soup.

Shell one quart of peas, reserve one cupful of them and put the rest on to boil in a little boiling water; when done, mash them through a fine colander, water and all, return to the fire, add the cupful of peas, a head of tender lettuce chopped fine and a quart of water. When peas are soft, season with salt, pepper and sugar to taste, thicken with one tablespoonful of flour blended with two of butter, let boil until the flour is well cooked and serve with a spoonful of whipped cream added to each dish.

Cauliflower Salad.

Wash well in cold water. Boil in plenty of salt water until the vegetable is soft. Drain off the water. Break the vegetable into flowerets, season with salt, pepper and a little vinegar and oil. Pile them in a pyramid on a dish and pour over them a white mayonnaise. Arrange around the base a border of carrots or beets cut into dice or fancy shapes to give a line of color. Place a floweret of cauliflower on the top.

Cement For Glass.

Tumblers, fruit dishes, lamp chimneys, globes and other similar articles can be mended when broken with the following preparation: Take five parts of gelatin to one part of a solution of bichromate of potash. Cover the broken edges with this and press together, then place in direct sunlight for a few hours. The mended article will not come apart even if washed in boiling water, nor will the break show.

Mayonnaise Dressing.

Two eggs, three tablespoonfuls of cream, one-fourth cupful of water, one-fourth cupful of vinegar, one teaspoonful of mustard, one-half teaspoonful of salt, two tablespoonfuls of sugar. Beat eggs, add cream, mix balance thoroughly and add slowly to cream and eggs, stirring continually. Cook in double boiler, stirring until thick.

Renovating a Skin Rug.

To clean a white skin rug make a very strong lather by boiling soap in a little water; mix this with a sufficient quantity of water—rather more than lukewarm to wash the rug in, and rub boiled soap on those portions of it which may require additional cleansing.

To Stiffen Eggs.

When the whites of eggs for a meringue will not stiffen, either from a little of the yolk being mixed with them or any other reason, add a small quarter of a teaspoonful of baking powder and whisk again. The result will be a firm white snow.

A Darning Hint.

When darning stockings baste a piece of netting over the hole, then proceed to darn in and out of the net. The result will be a neat patch.

There's Health in Every Drop of
Irondequoit Port Wine
Since 1832
only selected luscious Oporto Grapes have been used in making
Irondequoit Port
EACH BOTTLE
Contains wine that has been "aged" seven years before bottling.
