## LEARNING TO FORGET BEAUTY

Difficult Lesson for Women. English Writer, in Describing the Aged Queen Alexandra

"There is no more difficult lesson for a woman to learn than that of learning how to forget that she has been beautiful," writes a clever English woman.

"One afternoon I saw. Queen Alexandra driving slowly in her open motor through the cates at Hyde Park corner. For the first time it occurred to me that this rarely lovely queen is now an old woman nearing four-score yearsof age. Perhaps she had forgotten to be alert, as is her usual custom, or perhaps the heat of the day had fatigued her. But at any rate there was touch of tragedy in the thought that Queen Alexandra is learning slowly, but surely, that extreme beauty can fade although the charm of personality can challenge the attack of time.

"I fancy it must have been the queen mother's costume that brought this idea most surely before me. She was wearing a mantle or cloak made of some material in shade of iridescent blue spangles with a close frilling of black lace all round the edge, Her hat or bonnet was of the usual royal shape and built of jetted stuff to match her cloak, with a small white aigrette standing erect in front.

'Under ordinary circumstances one would regard this quaint nineteenth century toilet of the queen mother's as district on the western slops of the a characteristic conventionality, but Rocky mountains near Glenwood somehow on this sunny afternoon it Springs, Colo., who is now potato ex-represented to me a sacrifice to the in- pert of the United States food admin-

HOW THE BONANS AND GREEKS BATTLED

IN THE WARS OF LONG AGO. -In the old days when the Romans and Greeks fought furious battles, the charloteers drove their cars in all directions, huried their javelins, and by the din and clatter of horses and wheels commonly threw the ranks of the enemy into disorder, and making their way among the squadrons of the enemy's cavalry leaped down from the charlots and fought on foot, quotes the St. Louis Globe Democrat. The charloteers then withdrew little by little, out of the fight, and placed their charlots in such a way that if they were hard pressed they could readily retreat; to their own side. Thus in battle they afforded the mobility of cavalry with the steadiness of infantry, Daily practice enabled them to pull up their horses at full speed when on a steep slope, or to run out on the pole and stand on the roke, and to get nimbly back into the charlot.

With the introduction of cavalry in the later age came larger horses, but their use for this purpose seems to have been restricted to isolated areas. There is no doubt that the West German tribes, as late as the campaign of Caesar in Gaul, used only the shargy pony. It is said in cavalry actions they held it disgraceful and slothful to use any kind of a saddle, and instend of charging in squadrons they dismounted and fought on foot. As far as England is concerned the art of riding seems to have been introduced by the Normans. The Saxons appear to have been but indifferent horse-
