

A Study in Monogamy

By JANE OSBORNE

(Copyright, 1918, by the McClure Newspaper Syndicate.)

It was just before Philip's first college vacation that he celebrated...

On the charge of never having done anything in life that he had not been made to do...

"Yes, but what value has it been—pictures of pretty girls and horses or something of that sort," muttered the old scientist...

"Here is a bargain," said Philip, draining the coffee pot for a last cup of coffee to offer to his companion.

"I don't know what you have been doing, but I thought you would have given up long before this," Philip said to him.

There was just a little disappointment in the old man's face as he took the girl's hands into his.

Philip needed no further proof. He believed the old man had exaggerated the matter, but he had no doubt of the young woman's dementia.

"How's she queer?" queried Philip. "Powerful queer—that's how queer."

There was just a little disappointment in the old man's face as he took the girl's hands into his.

"He did take them," the girl assured him. "He took every one and took most of them alone."

"And, anyway," interrupted the nephew, who perhaps had never appreciated his eccentric old uncle as much before...

And in truly patriarchal fashion the white-haired old man stood and raised his hands in benediction.

Information concerning the number of eggs produced by various species of fish has been limited mainly to rather rough estimates.

"Oh, please trend south," said the strange young lady. "I think they are settling here in this tree."

"I think they are located," she told him. "They are in the next tree—two thrushes."

"Why, please, were you watching just those thrushes?" he asked her, and she told him that if he would let her stay and eat lunch with him in his shack...

All this amazing science of war flying is in the hands of boys and youths, barely old enough to find a successful airplane 40 years old.

Philip needed no further proof. He believed the old man had exaggerated the matter, but he had no doubt of the young woman's dementia.

"Well, you see, I am making a study of monogamy among birds—that is, I want to get a little data that will be of some value in establishing the fact that thrushes either are or are not monogamous—that is, that they do or don't mate for life.

Only One Aviator Has Reached Fort. All this amazing science of war flying is in the hands of boys and youths, barely old enough to find a successful airplane 40 years old.

THROWS POLLEN OVER BEES PRETTY LEGEND OF NIAGARA

Nature's Use of the Mountain Laurel Is One of Her Many Remarkable Devices.

Flop and away go the little stations of the mountain laurel and throw pollen over the bee which alights upon the anther...

The whole mechanism is like a hair trigger. It is so carefully adjusted that even a slight jar will sometimes set it loose.

Langauge ascribed to fish. Men of the Sea Have Their Own Idea of Articulation Peculiar to Their Catch.

There is a belief among fishermen that a herring, when caught, articulates a sound similar to the word "choosee."

Red-finned herrings, called "loaders" or "kings and queens," are sometimes caught; they are regarded as an omen of a successful fishing.

The first step toward making New York an English colony was taken 250 years ago, when Charles II granted to his brother, the duke of York, a large territory in America.

"I've always longed to meet you," she said with a timidity that indicated her admiration better than any elaborate compliments she might have expressed.

There was just a little disappointment in the old man's face as he took the girl's hands into his.

Information concerning the number of eggs produced by various species of fish has been limited mainly to rather rough estimates.

When the weather bureau reports that an inch of rain has fallen, it means that the amount of water that descended from the sky in that particular shower would have covered the surrounding territory to a depth of one inch if none of it had run-off or soaked into the ground.

It means that on one acre of ground enough water to fill more than 600 barrels of 45 gallons each has fallen. That quantity of water weighs more than 110 tons.

French Fruit Trees Murdered By Retreating Germans

French Official Photograph.

In their great retreat from the Somme front in the spring of 1917 the Germans not only destroyed all houses, farm implements and property they could not carry off...

By one or another of these three methods every fruit tree in the entire section the Germans were forced to give up was destroyed.

An official census taken in 110 communes of the Somme region has shown that more than 100,000 fruit trees were destroyed in those communes alone.

It is the nation guilty of this crime with which America is at war, and it is that America and the world may be secure against such outrages in the future that it is the duty of every American to invest his money in Liberty Bonds and help win the war.

Give the Kaiser one more slam! Get behind your Uncle Sam! Buy a Bond and be his friend! And help the griffe abroad to end.

Women As Farm Helpers. May Ably Assist in Solving the Farm-Labor Problem—Many Ways to Render Service.

White women can do much in the solution of the complex and rather pressing farm-labor problem, it should be understood that the man power of the country is not yet exhausted...

The primary responsibility must be assumed by the regions and communities most vitally affected, because no agency of government can create labor or compel men to pursue any particular vocation.

In addition to relieving men in towns and cities, women can actually perform many farm tasks such as dairying, vegetable cultivation, fruit gathering, etc.

It does not seem to be possible to work out any uniform plan of mobilizing farm labor or of directing the employment of women on farms.
