HUNTER SAVED BY HIS DOG

Animal Carries Cartridges to Master Whose Life Was Endangered by Two Lions.

Here are some conclusions based upon Bruce's close observation of the habits of the California lion or cougar, and it will be noted that some of them are quite contrary to popular conception:

The lion is as fast as a deer for 100 yards, but if it has not caught its prey in that distance, will quit and stalk another. It is shortwinded, which is why it takes to a tree when the dogs are after it.

Wrong Party. Harry Carey, the picture star is about as affable a chap as one would care to meet, but once in awhile he does get peevish and this is most likely to occur when the company is on location and is in a hurry to get the work done and return to the studio.

American Companies Threatened. Spain is one of the great iron-ore centers of the world, shipping ore heavily to other European countries, as well as to the United States, and while it has some large iron and steel works, its output of the finished product has never been commensurate with its ore developments.

Congential Work. "What became of the movement started here to uplift the stage?" "It fell through."

Flag of Five Stripes. The new Chinese flag consists of five stripes, crimson, yellow, white, blue and black—to denote the five races comprised in the Chinese people—Mongol, Chinese, Manchu, Mohammedan and Tibetan.

The Supreme Test. "I might as well admit it," remarked Cactus Joe. "As a cowboy I'm a failure."

A Sufferer. "Did you ever eat any chile con carne?" "Yes. And I understood immediately what people mean when they say there is a great deal of suffering in Mexico."

Oh, Those Husbands! Wife—I won't stand your staying out so late nights! Hub—Really, my dear, you are unreasonable. You know very well I acquired the habit while courting you.

Financially Speaking. "Honest, old man, you appear to be growing shorter." "No wonder. Three times I've been let in on the ground floor of oil propositions, with the usual results."

NEW STYLES FOR THE FALL SUITS

Fullness at Back, Figure Remaining Slender, Flat in Front and at Sides.

FUR TRIMMING VERY COSTLY

Tendency to Depart From Fashion Except in High-Priced Outfits—Feathers Are More Important Than Ever.

"It is easy to bring out a new silhouette," said one of our greatest American designers, "but to launch one which really is wearable and that women will accept is a problem offering many difficulties."

A full-grown lion will scale 150 pounds, and is a potentially dangerous animal when cornered.

The lion is as fast as a deer for 100 yards, but if it has not caught its prey in that distance, will quit and stalk another. It is shortwinded, which is why it takes to a tree when the dogs are after it.

Three-piece suit of taupe velvet. The coat is elaborately embroidered in dull red. The collar, wide band at the bottom of the coat and cuffs are of brown chiffon banded with moleskin.

Black and White Patterns. A great deal of attention is paid to every detail in suits, and this model is no exception. Buttons and linings are selected with the greatest care.

Several of the exclusive dressmaking establishments are making blouses of fine white linen, batiste or organdie, to accompany their tailored suits.

The black suit described has a white organdie waist with a platted ruff bound with black silk. A narrow black ribbon cravat fastens the collar.

Waistcoats of heavy silks or linens, with sleeves and backs of a thin material, are part of some new three-piece suits. The vest is long, falling several inches below the waistline, and has smart patch pockets.

Points of interest in suits other than the silhouette are the materials, the colors and the trimmings.

Drop Fur for Trimmings. There is a tendency to depart from fur as a trimming, except in very high-priced suits.

Feathers Are Important. Feathers are more important in the fashions of the hour than they ever have been.

Feathers are more important in the fashions of the hour than they ever have been. This means that they take a very prominent place, for during the past two years quantities of feathers have adorned clothes, but the seemingly extravagant use of plume last year appears meager in comparison.

How to Live

Common Sense Comments on Health, Happiness and Longevity By GEORGE F. BUTLER, A. M. M. D.

CHEWING FOOD.

It has long been recognized that the mouth constitutes an important factor in the physiology of digestion, and this importance is increased by the knowledge that many chronic diseases are directly dependent upon absorption of pus from pus pockets at the roots of the teeth, or upon auto-intoxication, poisons originating in the intestinal tract.
