

Bright Eyes and Rosy Cheeks, Indicate Health,

A new road to health was opened many years ago when Father Mollinger's Famous Herb Tea was compounded. It soon became famous because it attracted attention to those who took it by reason of the almost immediate improved appearance, bright sparkling eyes and red cheeks evidence of an abundance of pure red blood and an internal condition in first class order is the reward of thousands now using

Father Mollinger's Famous Herb Tea

It is used by healthy people as a health preservative. It eliminates body poisons, strengthens the internal organs and improves the general health. These are roots, leaves, bark, flowers, plants, seeds and berries combined with medicinal herbs and wonderfully helpful. Taken hot at bed time it breaks up a bad cold over night. Mothers give it to children to keep them fit to school. It is a good spring tonic. Women and girls regard Father Mollinger's Famous Herb Tea as a great health asset. Price \$1.00. Mailed postpaid everywhere. Order direct from

Weekly Calendar Of Feast Days

(By N. C. W. G. News Service)
Sunday, April 2. - St. Francis of Paula, who left his home in Calabria to live as a hermit. He founded the "Minims" who observed a perpetual Lent and never touched meat, fish, eggs or milk. He cured the sick, raised the dead, averted plagues and brought sinners to repentance. He died on Good Friday, 1507.

Monday, April 3. - St. Richard of Chichester, who refused an estate and a brilliant marriage to study for the priesthood at Oxford. He became chancellor of Oxford and later chancellor of the diocese of Canterbury. Noted for charity, purity and miracles, he died in 1253.

Tuesday, April 4. - St. Isidore, who succeeded his brother, St. Leander, as Archbishop of Seville, and who aided materially in driving the Arian heresy from Spain. He died in 686 and sixteen years later was named a doctor of the Church.

Wednesday, April 5. - St. Vincent Ferrer, the "Angel of the Judgment", whose miraculous apostolate of twenty-one years resulted in the conversion of thousands in Spain, France, Italy, Switzerland, England, Ireland and Scotland. He was understood in all languages, although he spoke only in Spanish. He died in Brittany in 1419.

Thursday, April 6. - St. Celestine, who succeeded Pope Boniface in 422. He condemned the Nestorians and counteracted the Pelagian heresy. It was he who dispatched St. Palladius, a Roman, to preach the faith in Scotland and Ireland. He died in 432.

Friday, April 7. - St. Hegesipus, one of the primitive fathers. He was by birth a Jew, and gave personal testimony before the principal churches of the east and west. He wrote, in 188, a history of the Church in five books, the loss of which is greatly regretted.

Saturday, April 8. - St. Perpetua, Bishop of Tours, which he governed thirty years. He had great devotion to the saints, especially St. Martin, whose charity and gifts to the poor he imitated. He died in 491.

Becker's Market
The new retail market just opened by Mr. Fred H. Becker at 7 Market Street is one more step along the line of achievement.

Mr. Becker opened first to satisfy wholesale trade only, now he has opened to satisfy both wholesale and retail trade, giving to both the same in quality and price. This is not all, for soon he will open a first class sausage factory at No. 12 Market street in a new building.

The writer was shown through the ice cooler and freezer by Mr. Becker, he saw everything from Turkey to Partridge, beautiful Porterhouse and practically all kinds in meat. The refrigerator and freezer is now open for your inspection.

The Retail Department is under the supervision of a well known market man, of 25 years standing, Mr. Philip Weber, formerly of St. Michael's section at 570 Clinton Avenue North. Mr. Weber will see that all of his old friends are given the best of service as to quality and low prices at all times.

A LINE O' CHEER
By John Kendrick Bangs
THE AMBASSADOR
I WOULD not care to be a King, Or call myself an Emperor, But it would be a joyous thing To be the King's Ambassador. And carry friendly gifts of Light To Courts where Darkness rules the way, And in the gloomy realms of Night Be smiling Minister of Day.

WHY Condensation of Moisture Results in Fogs

What is fog? The average person would say it is low clouds resting on the earth's surface. This is quite true, but the question is usually dropped at this point and little thought is given to why these clouds form so much nearer the ground at some times than at others.

As the weather bureau explains it, both fog and clouds are formed when condensation of moisture takes place in the atmosphere. Fog is composed of minute particles of visible vapor. They were once believed to be hollow spheres, but science now declares that each individual drop is a solid body of water enveloping a particle of dust in the air and supported by the upward tendency of air currents and the resistance of atmospheric particles to the falling of minute spherical particles. The diameter of the smallest visible particles of fog has been estimated to be 1-180 of an inch.

Fogs are seldom more than 1500 feet in depth, and sometimes they only extend 20 to 30 feet above the ground. They have been known to form in a stratum to only the height of a man.

In accordance with the conditions under which fogs develop they are divided into two general classes, "radiation fogs" and "advection fogs." The former kind, which may also be designated as "land fogs" and "summer fogs," are likely to occur along streams and rivers and in mountain valleys during any clear, still night in summer and fall. In such regions during a warm, calm day, considerable water becomes evaporated into the lower atmosphere, where, if the weather remains calm, a large portion of it lingers after sundown. This moist air, together with the heat from the earth at night is cooled rapidly by radiation into the clear sky, and they often cool to a degree below the dew point, which condenses the moisture into a visible vapor known as fog.—Indianapolis Star.

FOUND BALLAST LOST WEIGHT

How Ship Captain Discovered Properties of What Are Known as the "Barking Sands."

Fifteen miles from Waimoa, Kauai, where Captain Cook first landed on Hawaiian soil, are a line of windswept sand hills called the Barking sands. When dry, the wind on the sands makes them rustle like silk; to stamp on them brings forth different cadences; while to slide down them produces sounds like a dog barking.

For many years the problem of this phenomenon remained unsolved until the captain of a sailing vessel, one day, used the sand for ballast. Sailing out to sea, his ship became unmanageable against the wind. On examination, the captain found that his ballast had greatly reduced in weight.

Further examination revealed the presence of minute cavities in the sand granules.

The captain had filled his ship's hold with water-soaked sand. When the moisture evaporated, nothing was left but the hollow grains, which were too light for ballast.

The injection and ejection of air globe, heated to incandescence, which gives the electric light. As iron absorbs heat it first becomes a dull brownish red. Then, it becomes a bright red and finally, as it is heated to the melting point, it becomes a white heat. But there is no foundation for the report that peanuts promote the growth of hair. Investigation carried on in the bureau of chemistry with regard to the chemical and nutritive properties of the proteins of the peanut have demonstrated that, aside from the oil, which is easily digested and which furnishes a large amount of fuel or energy, the shelled peanut contains about 20 per cent of a high nutritive value.

Why Heat Turns Iron Red.

Probably more than one small boy has "strumped" his father by asking him what makes iron turn red when it is heated sufficiently. The reason is simpler than most fathers suspect.

Heat, if there is enough of it, always produces light. The heat of the sun surpasses all calculation and compels the electric light. As iron absorbs heat it first becomes a dull brownish red. Then, it becomes a bright red and finally, as it is heated to the melting point, it becomes a white heat. But there is no foundation for the report that peanuts promote the growth of hair. Investigation carried on in the bureau of chemistry with regard to the chemical and nutritive properties of the proteins of the peanut have demonstrated that, aside from the oil, which is easily digested and which furnishes a large amount of fuel or energy, the shelled peanut contains about 20 per cent of a high nutritive value.

Why He Was Jovial.

"Hooray" exclaimed Mr. Crosslots. "We're going to have a long, hard blizzard!"

"Why should that cause you to be jovial?" inquired his wife.

"Cook can't possibly leave till it's 1700."

A Modern Bank

Conveniently situated in the midst of the city's commercial district to take care of the banking needs of business.

Facilities at the disposal of our customers include prompt and accurate handling of checking accounts, investment information, collections, domestic and foreign, transference of funds. Interest paid a certain class of deposits.

Whether your account is large or small we are glad to take up with you in detail our facilities of service, for business men and firms seeking sound banking connections.

SAFE DEPOSIT BOXES of different sizes, to lease at \$3. per year and upwards.

Niagara's Future City.

An idea which has occurred to many minds since the last "harnessing" of Niagara falls was clearly put by a speaker before the Engineers' society of New York. It is that most of the electric power obtained from the falls will be used within a few miles of its place of origin instead of being transmitted to distant cities. In other words it is believed that at and near the falls will be situated the future industrial center of America. It would be theoretically possible, it is stated, to transmit power from Niagara as far as San Francisco, but the cost would be prohibitive. It is much cheaper to locate factories near the falls.

How Watches Are Affected.

A strange phenomenon, due, according to scientific authorities, to still unexplained magnetic influences, has for a whole month been observed daily in London. Watches and chronometers have been stopping suddenly. It has been useless to take them to the watchmaker, who could not detect the trouble nor remedy it.

After the lapse of an hour or two, however, the watches began going again, and all that is needed is to set them at the right hour.

Why Ship Is Feminine.

A ship is invariably spoken of as of the feminine gender. This is traced to the ancient Greeks, who called all ships "feminine" names out of respect to Athens, goddess of the sea. Friday is believed to be an unlucky day by those who are superstitious. It is derived from the fact it was the day of Christ's crucifixion, as well as the one on which Adam and Eve ate the forbidden fruit. Few, perhaps, are aware why a weathercock is frequently attached to a church steeple. This is believed to remind people of Peter's denial of Christ. It is a common belief that power's feathers are unlucky. This is due to the tradition, that the bird opened the gate of paradise to the serpent.—Exchange.

Your Home Should Be the Home of the Hoover

Because the Hoover will enable you to keep your home free from dust and dirt without having to resort to the nerve-racking, temper-trying, exhausting physical effort that accompanies the use of a broom. The Hoover beats and sweeps while it cleans.

The Hoover gets the deep dirt, combs out the nap and brightens up the color effects of carpets and rugs whether they be expensive or inexpensive.

We want to make your Home the Home of the Hoover, and will gladly demonstrate its merits, without obligation on your part, and at any day or hour to suit your convenience.
