NEW YORK IS LARGEST CITY

American Metropolis, in Population, Has Gone Far Ahead of the Capital of England.

New York has surpassed London in population, according to the New York city census committee, if the same radius of territory is included within the New York city limits as is calculated in the London figures.

"Greater London, it is explained, includes not only London county, but an "outer ring" in which the metropolitan police have specific powers and duties.

"The Greater London suburban area, irregular in outline, extends as far in some directions as 19 miles from Charing Cross," says Doctor Laidlaw.

This radius reaches Tottenham, Staten Island; part of Westchester and Nassau counties and the part of New Jersey that includes Newark, Jersey City and other large population centers immediately adjacent to New York.

The population of Greater London on June 10, 1921, was 7,470,168, while that of "Largest New York," including the outlying districts, on January 1, 1920, was 7,230,976.

Bishop Hickey Lauds Community Chest

In a statement regarding the forthcoming Community Chest campaign and its relation to the institutional and relief organizations under his jurisdiction, Rt. Rev. Thomas F. Hickey, bishop of the diocese of Rochester, says the institutions have never been able to do their work so satisfactorily as under participation in the chest funds.

"I regard the direction of our institutional or relief work in the care of a fellow creature as a grave responsibility. It is therefore a matter of serious moment to be equipped properly that the work thus entailed may be performed rightly.
