

THE EDEN ELECTRIC WASHER AND WRINGER MACHINE ELIMINATES THE STRAIN ON WASH DAY

Why? Because such machines banish the soul-trying, nerve-racking physical labor common to wash day in homes where the washing, rinsing and wringing are done by hand.

With an "Eden" you can do the washing in one-third of the time and the clothing will not only be washed better, but it will last longer.

Between two and three cents worth of electricity will do the washing for an average family.

The Doctor says—

"The fads, fancies and contrivances don't amount to anything. Just don't block nature in her work and she will get along all right. Don't wear shoes that make you toe-out when you should toe-in."

And that's exactly what the Doctor Shoe does—it simply doesn't do what should not be done. All it does is to give men's feet the change they are entitled to.

When you put on a pair of Doctor Shoes you toe-in and walk straight. That's the right way of walking and the right way of walking is all that is needed.

The National Shrine

The columns of the National Shrine are now about to be erected. There are eight very large ones weighing between eight and nine tons each, and 48 smaller ones of more than two tons each. Already two of the smaller have been donated.

The large columns are \$1,500.00 each; the smaller ones \$1,000.00 each. Will you donate one?

"THE CRYPT"

Those desirous of understanding from the architectural viewpoint the treatment of the National Shrine of the Immaculate Conception will find a beautiful article in the Architectural Record of July 1922.

Besides giving the early studies for the National Shrine of the Immaculate Conception as well as other studies, it gives the plan study as well as the interior and exterior views of the present plan.

Besides this a transverse section of the Crypt is shown. Speaking of this section, the writer of the article says:

"Underneath the triple apse is designed a particularly interesting type of crypt containing fifteen chapels. Correspondingly, the principal altar will be placed in the same local relation as the apse overhead. This crypt the construction of which is to be immediately undertaken, will have a capacity of approximately eighteen hundred persons. No pews are to be placed in either direction. Its height of the vault of the crypt is twenty feet six inches.

The architects are planning to have a very distinguished plan of mosaic, based on the early Christian examples of Rome, which may be executed as means will permit in the future. This will be applied directly upon the vaults. The intention is to create, by means of a combination of marble walls and mosaic vaults, such an effect of color as will induce the same sense of devotion that notably distinguishes St. Mark's, at Venice.

It is the conviction of the architects that no attempt should be made literally to relate the design of the building to any historical epoch, but that all traditional sources pertinent to the main motive of the scheme should be made to contribute. Out of regard to this point of view, they have felt at liberty to employ much of the beautiful decorative detail of the Lombardy architecture, the affinity of which with the Byzantine style is unquestioned.

The design, as finally achieved, as a product of gradual evolution under the long and careful study by the architects. The work of construction is now in hand, the building of the crypt having just been contracted for."

Such was the status of the Crypt of the National Shrine of the Immaculate Conception July 1922.

The following letter in response to an inquiry as to the amount of building material used in the construction of the Crypt up to March 31, 1923 will be of great interest to our readers.

April 6, 1923.
Rev. Dr. Bernard A. McKenna, The Catholic University, Brookland, D. C.

Rev. and Dear Dr. McKenna: The following is the information requested by you regarding the amount of Brick, Cement Sand and Gravel used on the Crypt of the National Shrine from the start to March 31st 1923:—

Bags of Cement delivered, 8,057
Tons of Sand and Gravel delivered, 2,057
Total number of bricks delivered, 188,000.

Trusting this is the information desired, we beg to remain respectfully yours,
The Chas. J. Cassidy Co., Inc.

When our concerts come over the "wired-wireless" and we plug into the lamp socket, light music will be given added popularity.

The railroads recently broadcast a safety message from stations in Pittsburgh, Chicago, Newark and Springfield, Mass., calling attention to the fact that 85,000 people have been killed or injured the last year in this country while trespassing on railroad property.

If you do not know the code and wish to receive messages, there is a device on the market at the present time which records the incoming signals on a piece of paper. The paper may be then read at the will of the operator. This method gives the person unacquainted with the code the privilege of hearing from stations which would otherwise pass over in the usual "buzz, buzz," style so unintelligible to the radioophone fans.

While lying in the harbor of Iquique, Chile, on the west coast of South America, the radio operator of the steamship Santa Luisa clearly heard the entire broadcast program of Station WJZ. The distance separating Newark's station from the steamship in an air line was 4,000 miles.

As a result of the widespread interest in wireless telephony one manufacturer has brought out a set of six double-faced records for teaching the telegraph code. Many persons, after listening to the radio-telephone concerns, have tuned in and "heard" the familiar "buzz, buzz" of the wireless telegraph messages being sent. Curious to know the meaning of the sounds they have cast about for some means of learning the code phonograph records.

The Canadian government is considering the question of the amateur radio field. Present plans are to allow the amateur using spark transmission a wave length up to 200 meters, while those using continuous wave transmission would be permitted a wave length up to 250 meters.

Campbell Device That Separates Telephone and Telegraph Messages

Although much has been said and written about the remarkable filters employed by the telephone lines and by advanced radio workers for the separation of telephone and telegraph messages, says the Scientific American, it remained for Dr. Frank B. Jewett, chief engineer of the Western Electric company, to demonstrate how the filter permits of transmitting radio telephony and telegraph messages simultaneously, and of separating these messages at the receiving end, at a meeting of the American Institute of Electrical Engineers.

The present electrical filter is the invention of Dr. U. A. Campbell, a telephone engineer, and makes it possible to separate the various frequencies at which the individual telephony and telegraph messages are carried. The detected electrical current in a radio receiving set is passed through the filter which separates the frequencies of the telegraph message from those of the telephone.

The filter differs materially from the ordinary tuned circuits familiar to the radio enthusiast, since it separates not single frequencies but bands of frequencies of any predetermined width.

The filter makes it possible to separate the band of frequencies comprising the telephone message from the band comprising the telegraph message. It can also separate one telephony message from another.

NATIONAL Home-Made Egg-Noodles

MADE
The old style Rolled and cut of fresh eggs and the strongest Western Flour
Sold by all Grocers
In large 7 oz. Sanitary Airtight, wax-paper packages. Price 15c each of 100 at 25c per pound.

THE STORY OF FATHER JOHN'S

Sixty-seven years ago Rev. Father John O'Brien of Lowell, Mass., recommended to his parishioners and friends the prescription that restored him to health and strength, to the people named it Father John's Medicine. You can rebuild the flesh that you have lost and build up energy to resist coughs and colds by taking Father John's Medicine. It is scientifically prepared so that even a weakened digestive system quickly absorbs the nourishment it contains.

DEATHS

Albrecht—Jacob Albrecht, aged 50 years, died April 28 at his home, No. 497 Caroline street. Funeral from Blessed Sacrament Church, May 1. Interment was made in Holy Sepulchre cemetery.

Connor—Mrs. Margaret Connor died suddenly at her home, Ontario Center, N. Y., on April 26. Funeral from St. Mary's Church, Ontario Center, N. Y., April 30.

Wegman—Oliver Jones Wegman, aged 37 years, died April 27 at the family home, No. 106 William street. Funeral took place from Corpus Christi Church May 1.

Schnurr—Martin J. Schnurr, died April 30 at the family home, No. 50 Oakland street, aged 64 years. Funeral from St. Boniface Church, May 3rd.

Zimmer—Cathleen Rae Zimmer, infant daughter of Mrs. Agnes Zimmer, died May 1st at Lee Hospital. Funeral May 2. Burial in Holy Sepulchre cemetery.

Burket—Mrs. Mary Burket, died May 2, at her residence, No. 265 Maple street. Funeral from SS. Peter and Paul's Church on May 5th.

Murphy—Mrs. Emma Murphy, died at her home, No. 110 Atlantic avenue, on May 1st. Funeral from Corpus Christi Church on May 4th. Burial in the family lot at Holy Sepulchre cemetery.

Clarke—Mrs. Margaret Minges Clarke, died at the family home, 242 Breck street, on May 3. The funeral will be held from St. Joseph's Church May 6th.

Nolan—Edward Nolan, died on May 3, at the family home, No. 410 State street. Funeral from Our Lady Chapel, St. Patrick's Cathedral May 6th.

Schoenberger—Mrs. Barbara Schoenberger, died May 3, aged 75 years and 9 months, at the home of a daughter in Irondequoit, N. Y. Funeral from St. Ambrose Church May 7th.
