## Revival of Lace in Paris Styles

Gold, Silver, Colors Have  
Extended Use of This  
Popular Fabric.

The revival of lace for use in trousseaux has every regard for fashion. Gold, silver and colors, writes a Paris fashion correspondent in the New York Times, have extended its use far beyond the limitations of the old black and white, without, however, superseding them. It is definitely recognized that while lace wedding veils are a tradition, plain white tulle is nearly always more becoming, and lace is made today to be cut ruthlessly into the required shape. Its use is widespread. There is practically no garment that could not use it in some capacity, except, perhaps, the stricter sports dresses. Older women are rejoicing in the softening effect of lace collars, jabots and revers. Whole lace dresses vie with lace and georgette and other mixtures. Black and white lace, nevertheless, remain the smartest among all the lace fashions.

Lace is widely used on evening or afternoon dresses. Heavy black Spanish lace may be sewn together with black chiffon, keeping to the straight simple outlines of the moment, but having a very rich superficial effect. Black chiffon is also used over petticoats of thick black lace, which appear rough below it. Lace is not only flounced in the tiered dresses but is matted as well in the latter case.

Afternoon Dress of Black Chiffon  
Lace and Black Satin.

It is of cobweb consistency. Thin lace and thick lace are used together. Very spidery white lace is sometimes plaited very slightly and worn over black lace. The faint lines of the plaits cut agreeably across the patterns of both layers.

On the picture dresses lace is used for the panniers or for the full skirted skirts that go with them. The lace fichu has also been revived, though it is apt to tie anywhere but in front. A favorite method is to knot it on the shoulder, of the low neck, rather as handkerchiefs were knotted a year or two ago. Dinner dresses of lace might be described as handsome. Here black is most in vogue, white being reserved for dance frocks. Where lace and georgette are mixed the accentuating lines are produced by the emphasis either of the lace or georgette. In dresses made of other materials the extras are frequently made of lace. Plain chiffon dresses have "dalmatics," or sleeveless coats of lace. Sometimes the coats only reach the waist, and, being loose behind, have the effect of a cape.

## Sleeves Have Returned to Milady's Dresses

Sleeves have returned to women's dresses and are the leading feature of the mode. The day of the bare arm appears doomed this season.

The disappearance of the bare arm is not due to the edict of the arbiters of fashion, said one of the leading couturiers of Paris, but to the wearers themselves.

"We make some 200 models every season," he said. "The women come and see our dresses and all choose the same 15 or 20 models. These 15 or 20 costumes which smart women, following some mysterious command, pick out, make up the new fashion. It seems that elaborate sleeves are the leading innovation of the mode, although during the warmer summer days this tendency may subside and leave the supremacy to the short sleeve, although the sleeveless frock would be worn only for dinner and evening affairs.

## Capes Good for Summer

Capes of every size and shape, of every degree of amplitude add of every material hold the center of the stage in summer fashions. From the stunning sports cape of plaided or novelty wool to exquisite transparent affairs made of several layers of chiffon or tulle, these youthful and flattering wraps are more in evidence than they have been in many years.

## WHY Waterfowls Can So Easily Keep Afloat

The feathers of aquatic birds serve both as air cushions and as a heat insulator. Prof. Joseph Barcroft of King's college, Cambridge, in a Royal Institute lecture recently said that the reason waterfowl do not sink like other ordinary vertebrates in water is on account of the air retained in their feathers. The water does not work into the interstices between the frills of the feathers because they are so completely oiled that they never get wet even on the surface.

The air imprisoned in the feathers also serves to keep the bird warm. The hardness of water birds in this respect is fairly manifested by the familiar sight of ducks swimming in the ice-bound spaces of lakes and rivers, apparently enjoying themselves.

"It is not that the separation of a surface of cold water by an inch or so of air from the body of the bird would keep it warm," said Professor Barcroft, "but convection currents would be set up which would rapidly cool the bird." Caught up, however, in the fine meshwork of feathers, the air is almost motionless and, being a very poor conductor, the body warmth is all retained."

## Why Sleeping Person Seldom Is Quite Still

Although in sleep we lose what we call consciousness—the active direction of the mind—all our body and at least a part of the brain are still awake and working. Our breathing, our heart action, our digestive processes are still "carrying on," though at a reduced rate, and there is a bit of our brain still active.

In our sleep we may unconsciously take up a position leading to cramp or other discomfort, our digestion may be giving us trouble or the temperature of the room may have changed and the bed to be too hot or too cold. In any such event, the active part of the brain orders the body to do its best to remedy affairs. And so we find that we have turned over.

## Why Called "Pair" of Pants

The primary meaning of "pair" is two objects or things joined or in some way related. Thus we say pair of stockings, pair of gloves, pair of scissors, pair of doves, and so on. In the case of "pair of pants," the idea is of a single thing having two like or corresponding parts dependent on each other. "Pair of pants" and "pair of trousers" are holdovers from early times when trousers consisted of two separate, long hose-like garments—one for each leg.—Pathfinder Magazine.

## How to Blacken Brass

The usual method of obtaining a dull black finish on brass for interior camera fittings is to mix fine lamp-black with lacquer and apply with a brush. The actual quantities are arrived at by trial and error, and by painting a piece of waste material first until the requisite dull surface is obtained. If the finish is too shiny a little more lampblack should be added. If the result shows a tendency to rub off a little more lacquer should be added.

## Why the Eyelids Twitch

This condition is frequently associated with overwork and particularly overstudy. There may be associated errors in refraction, causing eyestrain and when this condition exists, it may be relieved by glasses. Twitching of the eyelids may also be due to inflammations of the eye and will cease when the condition is cured.

## Why Sun Changes Looks

The sun looks larger sometimes than others at sunrise and sunset because the conditions of the atmosphere change. The magnifying power of the blanket of atmosphere through which the rays of light pass to reach the earth depends on the amount of moisture in the air, and other conditions.

## Why Lawyers Are "Solons"

They are so called because Solon was a famous Athenian lawgiver. He became archon and improved the conditions of debtors, divided the population into four classes, reorganized the boule, the popular assembly, and the council of Areopagus.

## Why Foam Appears White

The fact that foam generally appears white is due to its being composed of tiny bubbles which reflect the light from their surfaces. When white light, such as sunlight, shines upon them, they therefore naturally appear white.

## Why People "Stretch"

The necessity or desire to stretch comes because certain parts of the body are not receiving the proper amount of blood circulation and stretching is an instinctive action to accelerate the circulation.

## Why Some Mice "Waltz"

The balancing apparatus of the inner ear of the mouse is imperfect, causing the animal to turn constantly in short circles. This defect is strongly fixed and transmitted with regularity to the young.

## Why Called "Arctic"

The word Arctic is derived from the Greek "Arktos," a bear, the reference being to the constellation of the Great Bear.

## "The Taste Tells" Where The Goods Came From

The products of a bakery are perhaps the most used of any necessity in the home. Consequently they are of the utmost importance to all. To meet with the satisfaction of everyone it is necessary that those products be not only tasty but pure. The laws, with the various inspections during the year look after the purity of the products to a certain extent. And right there the 18th Ward Bakery takes up the problem and completes it in every detail.

The selection of the ingredients is one of the important problems of a bakery. This branch of the business is not slighted at the 18th Ward Bakery. Only the purest and best are used in the products. As the result of careful supervision the work, the products are bound to be better than those of other shops. And the taste is not neglected, the experience of the employees look after that. Consequently from pastry to bread, all of their products are best.

## Everything In Building

Chas. P. Strogen of 45 Columbia Avenue, well known contractor, is not only a home builder, but he also does all sorts of carpentry work, roofing and repair work.

Mr. Strogen can offer to his patrons the assurance and guarantee of satisfaction that is the natural result when a task is performed by a man thoroughly familiar with his trade. This same guarantee is made the more effective for his workmen are well qualified and experienced to perform all contracts of this kind. All contracts, small or large, are given the same careful attention.

Mr. Strogen enjoys a reputation as a builder, with the result that he has built up a force of the highest type, equally well known for its responsibility in carrying out each contract to the letter as well as their efficiency in performance of same. Call Genesee 382 and Mr. Strogen will gladly give you any information which you may desire.

## Sulphur Vapor Baths Help Many

The Sulphur Vapor Bath, invented and perfected by the famous Dr. Kruse, helps many people all over the country, and will continue to help them. There are now close to three hundred of these wonderful institutions in operation over the country.

Rochester has been fortunate in having one of these institutions, and it is operated by Mrs. A. Knight, at 139 Park Ave. and the work done by Mrs. Knight, coupled with the satisfactory and efficient service, make it a pleasure for the city to patronize her. The Sulphur Vapor Bath is the most scientific remedy known for Rheumatism, Lumbago, Neuritis, High Blood Pressure, Colds, LaGrippe, Nervousness, Kidney disorder and general run down condition.

This is not a Turkish or electric bath. It is a Sulphur Vapor Bath, a Health Restorer, Health Preserver, refreshing, strengthening and invigorating. Treatments are absolutely safe, and the results of same are always good at all seasons of the year.

These treatments are inexpensive and are within the reach of all, and may be taken while living at home, thereby eliminating the expense incurred by a trip to one of the famous health resorts.

In addition to the above, this institution also gives a scientific massage, and there is a separate department for ladies with a lady attendant.

Call Stone 1403 for particulars, and Mr. Knight will be glad to advise you.

If we were all striving to be the sort of a man our mothers have always hoped we would be, there would be a lot of trouble left out of a lot of lives.

## ARKANSAS MUSINGS

A lazy man gets a heap of comfort out of the proverb about the race is not always to the swift.

Too many of ye pastor's clientele use their religion as a life preserver. They never use it unless they have to.

Most men are big babies. It only takes a minor dislocation to make them believe the whole world is out of joint.

For every man who is trying to get a corner on knowledge there are a dozen who are trying to get a corner on ignorance.

There may be ideal husbands and ideal wives in this world. But somehow or other they are never married to each other.

Don't get downhearted because you happen to make a mistake. Every time a smart man makes a mistake he learns something.

A man on Central avenue wants to know the difference between a silver and a fudge. A fudge is a silver with a "limousine" top, don'tcha know?—Arkansas Thomas Cat.
