Nazareth Guild Plans Big Party For November 4

The Nazareth Guild, which has been organized for some time, is planning a big party for November 4. The party will be held at the Nazareth church and will include a dinner, a play, and other amusements. The guild is composed of women of all ages and is very active in its work. The party is expected to be a very successful one and will bring in a good amount of money for the guild's funds.

Weekly Calendar

Sunday, October 27—St. Prudentius, while on a voyage to Ethiopia with his uncle, was captured by barbarians who put to death his uncle and his brother. Prudentius was raised in the King's court and on the death of the monarch received freedom. At the request of the Queen, Prudentius remained at court. He was ordained by St. Athanasius and consecrated Bishop of the Ethiopians. He gained many converts.

Monday, October 28—Sts. Simon and Jude. Simon was a simple Galilean called by Our Lord to be one of the pillars of His Church. Armed with great zeal, he went forth to the combat against unbelief and sin and made converts of many souls. St. Jude was a brother of St. James the Less. He preached the Gospel in Mesopotamia and India and St. Simon met him in Persia where they won the crown of martyrdom.

Tuesday, October 29—St. Narcissus, Bishop, was consecrated Bishop of Jerusalem about the year 180. One Holy Saturday when there was no oil in the lamps for the Paschal feast, the Saint told the faithful to draw water from the neighboring well and pour it into the lamps. It was changed into oil. The Saint was falsely accused by three enemies and withdrew secretly to the desert. But his accusers were confounded and suffered the terrible penalties they had called down upon themselves if their accusations were proved untrue, and God called Narcissus back to Jerusalem to resume his office.

A reception held. Members of the senior class will be in charge of the reception and with the officers of the Guild will receive the guests.

Refreshments will be served by the college students at each floor in the building. This committee is under the direction of Mrs. Thomas Haines.

Wednesday, October 30—St. Marcellus, the Centurian, Martyr, was thrown into prison because while a captain in the legion of Trajan, he refused to take part in the impious celebration of the birthday of the Emperor Maximian Hercules. He was beheaded October 30, 298.

Thursday, October 31—St. Quintin, Martyr, was descended from a Roman senatorial family. Full of zeal for the faith, he made his way into Gaul attended by St. Eulogius of Beauvais. Quintin established himself at Amiens where he was imprisoned and after being cruelly tortured, was beheaded in 287.

Friday, November 1—All Saints. The Church passes daily by a special veneration to some one of the holy men and women who have helped to establish in us their blood, devotion by their lives, or a life by their virtues. That, in addition to those whom the Church honors by special designation, she has inscribed on her calendar how many martyrs are there whose names are not recorded! How many terrible virtues and holy passions! How many just and holy anchorites or young children snatched away in their innocence. How many Christians who have died in great persecutions, are known only to God and who are themselves known only in Heaven. These memories, in their intercessions and we should not forget them.

Saturday, November 2—All Souls. When Our Lord ordered St. Odilo, Abbot of Cluny, towards the end of the tenth century to establish in his Order a general commemoration of all the faithful departed, it was soon adopted by the whole Western Church and has been continued unceasingly to our day. Let us then ever bear in mind the dead and offer up our prayers for them. By showing this mercy to the suffering souls in Purgatory, we shall be particularly entitled to be treated with mercy at our departure from this world.

Pulpit Politics Makes Soul Sick, Says M. E. Bishop

Richmond, Va., Oct. 25.—Bishop Collins Denry told a class being received into full church connection at the 137th annual conference of the Methodist Episcopal Church South, in session here last week, that he had received hundreds of letters in which the writers threatened to leave the church unless partisan politics is kept out of the pulpit.

"My soul has been made sick by hundreds of such letters," he said. "We cannot afford to drive people out of the church. Is politics of that much importance?"

Bishop Denry told the class that participation in partisan politics is going to cut your influence.

"The church, in its church capacity," Bishop Denry said, "has nothing to do with politics and this conference has nothing to do with politics."

"I am having difficulty in appointing men to charges because they would not keep out of politics," he said.

Fifth Child of Duce Receives Baptism

Rome, Oct. 25.—The fifth child of Premier Mussolini has received the sacrament of baptism administered by the pastor of the church at Carpena. This followed the registration of her birth by an official of the district of Forli, witnessed by the Premier himself, Senator Mosconi, Minister of Finances and Commander Sebastiani, an attaché of the Premier.

Telegrams of congratulations were received at Carpena from many different places.

Cemetery For Vatican New Concern in Rome

Rome, Oct. 25.—A matter of importance in affairs of the Vatican State is provision of a cemetery, either on land belonging to one of the many Orders in Rome, or on a tract to be acquired.

There is no available land within Vatican City. Two other plans suggested are to ask the Italian government to set aside sufficient land for the purpose, and to seek a portion of Vatican cemetery for the purpose.

LITTLE BILLY WALK A Red Wing Rooter

Sunday was their natal day. The Red Wings 'gainst the Blue. The Flower-City tooling it up. To baseball is ever true.

The fans were hurray scurrying. Bubbling over with joy. Who do you think I saw When I went whirling by?

It was little Billy Walk. His face looked mighty sad. The Bible in his palm. His thoughts were not of God.

The radio tuning the air. New Collins is up to bat. The Good Book took the count. His mind went all awat.

Retain Oh, you little Billy Walk,

You can root the sky. The bases they are full, Spread your wings and fly.

Oh, you little Billy Walk, You can root the sky. Flapper up you Red Wings, You'll win if you only try.

Oh, you little Billy Walk, You're not so very bad. The Preacher has forgiven you. And so has Almighty God.

Water, Sewer and Gas
Cost \$25 a Front Foot

The cost of utilities, such as sewer, water and gas mains, the necessary service pipes inside of curb line, cement walks, curbing and paving is about \$25 per front foot.

As to the increase in value that these improvements have upon land, this depends greatly upon local conditions.

The usual size subdivision lot, whether urban or suburban, is of little, if not practically of no value, without utilities.

A subdivision lot is increased in value one to two times the cost of utilities. In other words, the cost of all utilities cost \$25 per foot, a subdivision lot is increased in value up to double that amount, or \$50 per front foot, and in some cases it may even be more because with these utilities you have a piece of useful property—and without them a piece of useless property.

Work You Never See!

HIDDEN by lath, plaster, brick and wood, half of the plumber's work is out of sight.

And the part you don't see is just as important—more important—in fact—than the glistening fixtures you use every day.

It is imperative, that all the work—the seen and the unseen—be done by dependable, competent workmen. We only employ men whom we know—and whom you can trust.

Make a Health Examination of Your Home

Tudor Beauty Found in New Style Roofing

For many years comparatively few persons recognized the interesting qualities to be found in Tudor architecture, but recently there has grown in this country a widespread appreciation of the gracefulness and charm of this old English style.

When the art and design of one country are transplanted to another certain modifications and changes are likely to take place. The English roof was made of natural stone, and the first thought of the American architect was to use only that material. But American inventiveness is not satisfied to follow along the old lines, when some new product can be developed that will add superior qualities. Consequently there has been produced a new and fascinating roofing, tapered asbestos shingles, made in random widths and graduated thicknesses, in a wide range of rich but subdued colors.

The shingles are composed solely of portland cement, pure asbestos fiber and mineral oxides for coloring. They combine the beauty of a natural product with features achieved only by composition material. Instead of possible deterioration, age improves them. They possess a remarkable insulating value and may be had in various types to suit the type of building on which they are to be used.

Home and Add Comfort

No matter how beautiful the shabby exterior of a house, how complete the appointments inside, the labor-saving conveniences that lessen a lady's cares and no matter how charming the house from a standpoint of architecture, it is the awnings that add the final touch to the home that means comfort and beauty.

There is so much character expressed in awnings today, so much harmony of colors that blend into the house and bring out its full beauty and so much comfort during hot summer days, that awnings are a necessity.

Not only do awnings protect from the glare of midsummer's sun, but they are absolutely essential for many other reasons. Awnings should be selected with as much care as a lady selects her hat, color, style, harmony and many other things considered.

Store Heat in Water; Try to Cut Fuel Cost

By storing up heat in water, engineers of a Milwaukee company hope to provide a way without great expense for warming houses.

Their plan is to heat the water by electricity in heavily insulated tanks at night and keep the temperature at a useful height during the day by a small amount of current. The hot water would be made to circulate through the house in much the same way that it does in an ordinary furnace-heating system.

The value of electricity as a heating agent is recognized, but in daytime, when current consumption is great, and capacity is taxed at peak hours, sufficient electricity for heating purposes could not be delivered without the expense of erecting additional plants.

It is hoped that by the water-storage plan, no extra generators will be needed and the equipment used at night will be available for service during the day. The idea is to be tested out in competition with an ordinary furnace.

Insulation of Home Is Done by Many Methods

With the appreciation by the American home owner and home builder of the money-saving and comfort-giving possibilities of home insulation has come the development of various insulating materials until an exhibit of them would look almost like a school-room display of materials quaint and curious.

There is, for example, an insulating material made of a sawweed called "eel grass." Another is manufactured into a semi-rigid board from the waste fibers of sugar cane. Still another is what is called "spun limestone." Others are made from cork, wood fibers, asbestos, etc.

One of the most interesting is a cellular gypsum that comes in a powdered form and that is mixed with water before it is installed. When the water is mixed into this gypsum insulator a gas is released. This gas causes the mass to swell and rise very much in the manner that bread rises.

In this swollen state the material is installed. Then it "sets" (hardens). The result is an insulating blanket of a lightweight rock that is literally honeycombed with myriads of tiny dead air cells, which are the things that perform the service in insulation.

Virtually all of the insulating materials mentioned are effective fuel savers and comfort givers when in use.

Concrete Job Finished in One Day Is the Best

Any large piece of concrete work should, if possible, be started early enough to insure its completion the same day and thus avoid construction joints between one day's work and the next.

If it is necessary to stop work on a wall or foundation before it is finished, the concrete should be brought to a level in the forms and the surface prepared to receive the next day's work by placing pebbles projecting half way out of the concrete or by roughening the surface with a brovel. This will make a better bond. Before concrete work is commenced the next day, the top surface of the hard dried concrete must be cleaned.

If too much water has been used a creamy seum will be found which must be cleaned off. Then coat the surfaces with a paste of cement and water just before new concrete is applied.
