From An Old Friend He stopped at the postoffice one here was a letter from Johnny Toole, from California, dear old schoolmate. Bob read it as he walked homseward, holding the let der before him and occasionally bumping blindly into passers by Johnny was profuse in describing his win happiness. This Southern California is a little hunk of Heaven Hob, and I don't mind saying I am happy and rich. Got two of the swellest kids. Junior is as bright as lackie foogan, and sister will knock been frominated for Congress ad when I come out top dog in the November elections I will sweet dow in to Washington with an "Hon matric before my Beptisical name The Fritz Mahaney. That's in Fritz Mahaney.

While Rob are tits evening meal a esseenger brought this telegram Justor killed instantly today in sito accident Sister unburt. Bob's mind - "bitght as Jackie Coo -- knock 'em dead in ten years-Congress in the Fall". "Poor old he mused, "such is life."

A New Lafe Opened

That evening he called on the par the priesthood, would take too mamy years, the priest told him, but had he ever thought of giving his life to God as a Christian missionary higher? In the religious life there was need of men of all trades, plurabers, tailors, carpenters, elecbricians -- all might consecrate their skill to God. The confessor must have a confessional, the priest an al lar, the community a thousand and things that hammer and natio can make. In this hidden way the first great lay brother, St. Joseph. ad contributed a desirable share in the work of our Redemption. Bob had not thought of that, but he

world now. From an issue of "Catholic Mis lous", printed recently, we learn of the manyxdom of Brother Robert Reffly, who had entered the religious life of 16, had built with his own poor hards a hundred churches for the pasings, three hundred altars, no one knows how many confessional and haptismal foots, and had brought so many souls to God by his un zel from Heaven to number all. His mutyrdon in tar of Majacca, he somes of the labora of St. Ptans, was are irretrievable loss, the paer said, but l. life had been a wonresus lain for souis

Green Popular Color for Plumbing Fixtures

In the Instituenty chars the Amercan public has changed completely its attitude toward color in the home. Taventy years ago one of the largest arangactures of Hombing Equipment prit some colored plenter; fixtures on thre market. They wouldn't sell. The nrablic wasn't ready for color. Today (His company and other companies making colored exameted were and vitreous most by report an increase of 200 per cent in the sales of colored. fixtures in 1929 over 1928.

The most popular colors for bathreson fixtures and kitchen sinks are green lavender, orchid, ivory and foroun. Artists explain the popularity of green by pointing to the fact that it is a cool color.

Color in vitreous china and enamel is, obtained by the use of metallic pigrejents. It has required centuries and carlies experiments to find pigments Heat would withstand the heat of 2,290 degrees in the Bring of Vitreous china and the somewhat lesser heat necessary for the baking of percelain enamel on cast fron.

These pigments change color comprejety in the firing. Furthermore. the fring of the china and the frisher of the enamel on iron are accomralished by different processes. This makes it difficult, but not impossible, for manufacturers to obtain the same shade of color in the bath, which is enameled, as in the water-closet which must be vitreous china, or in the lavatory, which may be vitreous china or enamel.

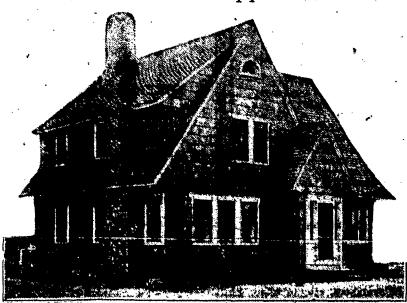

Because of this difficulty in matching colors in fixtures made by different processes, most plumbing contractors will advise the home-owner that all of the colored fixtures he selects for his home should be made by the same manufacturer. It is now possible to buy a complete bathroom ensemble. consisting of a built-in tub, a witreous china lavatory, a dressing table, a sylon jet closet, a dental Lavatory, towel bars, and recessed soap dishes-all with perfectly match-

While a large bathroom may permit the use of contrasting colors, in a small barthroom, good taste would dictate that all fixtures be of the same color. Sometimes lights will create the effect of unmatched fixtures. For instance, there is usually a strong light over the layatory and a weak light, near the tub. While discrepancles in lighting may cause an apparent difference in color values, an ideal lighting system would show a perfect matching of color.

ing colors.

Vapor Heating System

Helps Cut Fuel Bills There are three types of radiator certing systems in general use in resilence construction today. Hot water,

steam, and vapor. Water is an ideal medium for conveving heat because it will supply a temperate, even heat that will not rob the air of its natural humidity. The avstem is Chan in operation and flexlblo, that is the temperature of the water may be varied to suit outdoor

conditions. All other types of radiator heating systems ufflize steam as the heat conveying medium. While the one pipe steam system is the cheapest of all radiator heating systems, in recent years there has been a growing tendency, especially in new residence construction, toward the use of the vapor

A unpor heating system is a twooth all mests grown mests enter nir eliminated from the pipes and radiators by means of an air climinator in the basement and sir trops at every radiator. It is called a vapor system because it utilizes steam at low preswures, at times operating under a partial vacuum. For this reason the wafer in the boller of a vapor system has a very too boiling point - some-Time a na low mater degrees

The low boiling point of the water is one reason for the economy of fuel in a vapor system. The other reason why a vapor system is economical is the fact that with the air eliminated from the radiators only a small amount of steam pressure is necessary to force the steam into the radiators. The fact that the hir, once clim inated from the radiators, is presented from re-entering accounts for the

flexibility and responsiveness of the

Unlike the single-pipe steam job, the vapor system allows easy control of radiator temperature by means of the valves. Most vapor systems are installed with valves which may be opened one-quarter, one-half, threequarters or full as the occasion demands. The vapor system is quiet in its operation. There is no noise or odor from air valves because the air is eliminated from the system in the

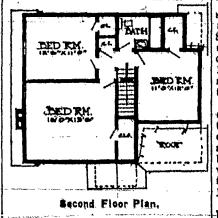

basement. Any type of steam heating system, whether it be a one-pipe steam system, a vapor, or a vacuum system, requires less radiation than a hot water system. Heating contractors ordinarily figure about 60 per cent more radiation for a hot water job than for a steam job.

While this is a saving in the installation cost, the thoughtful home-owner

Washington, April 4.-A bequest Philadelphia.

is secured through the use of shingles and the architectural design of the roof which gives the suggestion of steep pitch making sharp gables. The entrance door extends out from the house proper and has the same steep pointed gable roof that the house itself has, How the rooms are arranged in this house and the dimensions of

ench are shown on the accompanying floor plans. It will be noted that the exterior is similar in a way to the usual Colonial layout of rooms. The wide entrance hall has the living Maria Sarto, only surviving sister of room on one side and the dining room Pope Plus X. died here Sunday. She on the other with the stairs to the had been ill for several weeks. second floor running out of it. This hall leads back to the bedroom at the brother on many of his pastoral misend of which is a invatory. Back of sions before his election as Pope in the dining room is the kitchen with 1903. Recently she has lived in a a breakfast nood adjoining. As all small apartment overlooking St of these rooms are thus connected the floor plan makes the work of caring for the house comparitably easy.

The three bedrooms upstairs are light and airy and one of them is un-6 inches.

A basement is provided for housing daughter.

the heating plant and for storage. will not overlook the fact that the radiators are not so hot, the velocity of the air currents is less than in the case of a steam heating system.

With reference to installation costs. systems are rated in the following orsystems are rated in the following or Trinity College, Washington, reder by heating contractors: A one turned home last week. pipe steam job is the chenpest. A inpor system costs about 25 per cent more than a one-pipe steam system and a hot water system costs about 85 per cent more than a one-pipe steam

Wood Trim in Darker

the fluishing of woodwork, either as a part of the wall or us a part of the furniture. The former is, in most en es, preferable. As a part of the wall it should be a shade or two darker of the same color as the wall. This histires harmony and good taste, and gives that restfut effect of space so much to be desired.

In the second method the woodwork takes the color of the furniture, or, perhaps, only the doors and permacent furniture are given the furniture "standing trim" have the wall color. This mothod may be successfully used In large rooms, or in rooms that have a relatively small amount of woodwork, so that it does not distract the attention from the sum total of the

Finish for interior woodwork may be 1034 semigloss or dull. The high 2032 is most easily kept clean, but does not usually please the eye as well as a dull finish. The flat finishes are much more artistic, and when properly done are quite as serviceable. There is now on the market an oil which produces distinctive effects in eggshell and satin finishes without isborious rubbing or even stipling and which is washable and very durable.

Lacquer Is Gaining

Rapidly in Favor Lacquer is a finish rapidly gaining in favor. The material itself is a rather complicated chemical combination of guncotton, solvents, drier and pigment, all of which, when combined, give a quick-drying, opaque finish with a beauty all its own. A big asset of lacquer is its quick-drying property, but the colors also have a certain richness of tone and the finish a luster which cannot be duplicated exactly in any other type of finish.

Attempt To Burn Catholic School

(By N.C.W.C. Nows Service)

(Cinclinati, April 4 .-- Police are seeking the persons responsible for an incendiary fire in St. Philomena School, which was extinguished with comparatively little daniage only because the pastor of the parish, the Rev. Charles J. Kipper, saw the smoke issuing from the building and

turned in a fire alarm. The fire originated in two closets on the third floor, and was declared the work of a firebug because the closets are separated by a corridor, and fire could not have started in both at the same time. Kerossne was found in the hall, and was said to have been used to start the blaze. Damage was \$3,000 .-
