HERE'S A NEW WAY VALUE OUT OF EVERY

> The ideal solution of course, is to take advantage of natural drainge by locating the house on the rown of a knoll which slopes off to both sides. Lacking that advantage, care should be taken to ness near the house. The house will often look deceptively high before the finished grading is completed, causing a tendency to judge the foundation by the natural grade and place the house too low. On hillside sites when the uphill side of the house is placed below the natural ground level, special care should be taken to direct the ground water around the house by proper grading, walling, and draip tile.
>
> Expense need not be the determining factor in laying out a lot before the finished grading is completed. Sirioin chops are prepared as any other lamb chops, by broiling, according to Inet S. Willion, home economist. To parboil size of the house is placed below the natural ground level, special care should be taken to direct the ground water around the house by proper grading, walling, and draip tile.

Home Planning

(Prepared By National Lumber Manufacturers Association) It is no more than human to hink first of existing shade trees, an attractive view, or privacy from surrounding houses when you are considering the placement of your house on the lot. Or placement may be governed by the size of the lot and local building restrictions. However, you should not lose sight of the prime importance of drain

In looking at an attractive hulld. ing site, it is often easier, even tempting, to compromise by accepting the present trees and the top-soil of the natural grade than to undertake rebuilding it to improve the drainage, whereas, a therough job in the beginning would mean years of satisfaction and should not be slighted. If there are good trees on the site, they can be walled for protection and aeration provided for the roots Topsoil is ing and respread on top of the finished grade The important point to remember is that it is easier to do a good job of grading and drain-age when building than later when sod and shrubbery must be moved
