VEND War Industries Training Classes will train you for a war plant job free.

VEND War Industries Training Classes will help you improve on your present war plant job with upgrade courses free.

Women can register now at the United States Employment Service for immediate assignments to any one of the seven high schools running VEND Courses.

Men seeking pre-employment training can register at the United States Employment Service or directly at the VEND Schools.

All registrations for the upgrade and refresher courses will be accepted directly at the VEND Schools.

Call Main 2600, Ext. 32 for general information or write VEND War Industries Training Office at the Board of Education, 13 S. Fitzhugh Street.

"It is your patriotic duty to take advantage of these free war plant training courses to help in the Production-For-Victory program."

Aguinas To Open Sept. 8 With Three Training Courses For War Work Added

Aquinas Institute opens its doors to the Catholic Students of Rochester on Tuesday, Suptember & Reflecting the emphasis on training for war work, three courses are being added. These instinder Fundamental Principles and Practices in Radio; Basic Aeronauties; and Introduction to Business.

Aware that his best contribution

Aware that he best contribution to the war program consists in strengthening the existing values of a general education, aquinse is adding the courses in stadio and Aeronautics in order to give interested and qualified students an opportunity for some specialised wave.

The course in Radio will be open only to Seniors ance Algebra, Plane Geometry and Physics are pre-requisites. That independution will be open to qualified Juniers and Seniors. The course in the introduction to Susiness will furnish an additional first-year elective.

The existing program in the seiences and in mechanical drawing

has been amplified to meet the needs of the increased o rollment

Military Stress Basic Courses In High School

"In view of the analysis of recommendation of military authorities, it is most important that our Catholic high school teachers vitalize and modernize the present basic courses in mathematics and science in preparation for military activities."

This was stated in a letter sent rected to take these subjects. cace; that more boys should be di-

That the basic courses. as themsities are selecte should not be supplanted by special courses, but rather that the basic courses is modernized and vitalized illustrative and problem meterials dealing with aviation, navigation, engineering, etc. It was suggested that such illustrative and exching material methy well and problem material might well be substituted for ebsolete ma-terial that is now contained in mathematics and science courses and textbooks.
Analysis Summarises

"The summary of the analysis of the survey states: Military train-ing in specialized fields such as aviation, engineering, artillery and other fields is organized in rela-tion to and upon the foundation of basic education as now furnished by the secondary school or by the secondary school and college. It is the experienced judgment of re-sponsible military training authorities that the specialized and technical training for military purposes can best be done in schools organised by the Armed Service for that purpose and by an instructional staff of carefully selected professionally trained personnel.

The secondary school has a vital contribution to make in providing boys with a sound educational background which may serve as the basis for advanced military training. The secondary school may greatly increase its effectiveness first by encouraging boys eligible for the military services, par-ticularly the Air Service, to take those subjects which are basic to technical military training in aviaties and other fields; and which are now effered in the secondary school; and second, by sfrengthening the program through the use of illustrative materials and practical problems and through natural extensions of present offerings upon already existing foundations in mathematics and science, without distorting the present second-ary school framswork and without sacrificing its basic values for general education purposes. (Rosic Educational Requirements for the Military Service, Division of Sec-eminary Education, Stat eEducation Department, Albany, N. Y., 1983). The letter states that military, authorities desire that supple-mentary courses in radioactivity

and pre-flight aeronautics be introduced solely as electives with basic courses such at elementary algebra, plane geometry, interme-diate algebra, advanced algebra. solid geometry, plane trigonometry, general science, general biology, physics and chemistry, as pre-re-
