**Church Construction Sets  
New Six-Month Record**  
Washington, D. C. — (RNS) — Church construction set a new record for the first six months of 1956, the Department of Commerce and Labor reported. The figure was \$336,000,000, exceeding by \$1,000,000 last year's mark for a similar period. June construction totaled \$15,000,000 as against \$13,000,000 a year ago. Building activity by non-public hospitals and charitable institutions, most of which are church-related, continued to drop but reached a new construction high in the first half of the year. The \$149,000,000 worth for the first \$247,000,000 worth of buildings half was \$23,000,000 less than the put into place compared with six months of last year.

**Asphalt Shingle Production Hits All-Time Record in '55**  
More and more home-owners double the 19,793,522 squares shipped ten years ago. A Housing and Home Finance Agency survey showed that as far back as 1939 more than 80 per cent of the homes being erected were roofed with asphalt shingles. The material is popular because of its ease of application, durability, fire-resistance, and availability in many solid and blended colors. The industry also shipped 24,404,190 squares of roll roofing in 1955. This included 11,501,835 squares of smooth roll roofing and 12,902,255 squares of the mineral-surfaced type. The overall total of all types of asphalt roofing shipped in 1955—97,209,700 squares—shows a rise in shipments over the last ten years of more than 32,000,000 squares above the total 60,065,823 shipped in 1954, and were almost double the 19,793,522 squares shipped in 1945.

**Keep House Cool; Flat Roof Doesn't**  
Studies conducted by University of Minnesota scientists show that mineral wool insulation has even greater effectiveness against the heat of the sun when it is installed in a house with an attic. In one instance, two houses of the same size and same construction were studied. The only difference was that one house had a roof of sufficient slope to form an attic. The other had a roof that was nearly flat. Less heat came through the ceiling of the house with the attic than the one without. It was reasoned that the attic, in effect, reduced the sun's heat load. Much of the heat was carried outdoors through the louvers. A benefit of the sloping roof, quite apart from heating and cooling, is that the roof can be covered with colorful asphalt shingles. Since the shingles come in such a wide range of colors, the homeowner can decorate his roof in any color he wishes.

REPLACE WITH YEAR ROUND AIR CONDITIONER	
WARM WATER OR STEAM HEAT	FLOOR FURNACE OR SPACE HEATER
ADD SUMMER AIR CONDITIONER	
MODERN FORCED-AIR FURNACE	WINTER WEATHERMAKER FURNACE
INSTALL CONVERSION CONDITIONER PACKAGE	INSERT COIL IN CASING AT TOP OF FURNACE

**Creating Rooms in Attic Space**  
The age of a house is no barrier to converting its attic into living space. Insulation is always the essential first step in attic expansion, and ways have been developed to fit batt or blanket insulation between studs and rafters regardless of the house's age or the method of framing that was used to build it. Mineral wool batts and blankets manufactured for 16 or 24-inch stud spacing fit most construction, but batts and blankets for 12- and 20-inch spaces also are available for houses with non-conventional framing. Insulation is easily cut to fit-between sizes on the job. A sharp knife is the only tool necessary. An ordinary kitchen knife works well.
