What does cheap mean today? It means a lot of value for your money. And that's your electric service! While the price of almost everything else has been going up, the price of your electricity per kilowatt-hour has been coming down.

So why is your bill-higher? Because you keep finding more jobs electricity instead of you! How many useful mariances have you added in the last two? Think how much time and work they're saving you every day!

When you consider all this, you'll probably agree; electricity is still just about the biggest bargain in your family budget!
