No game of blocks is this, but an I.Q. test being given by Sister Mary Rosaire.

Sister Mary Anna and Sister Edwardine give individual attention in a special reading class.

On a hot, summer day, Sister Mary Petrus' World Literature students are deep in Dante's "Inferno."

## McAuley College Offers Students Special Services

Approximately a thousand children, representing 65 schools, are availing themselves of the special services of 70 Sisters of Mercy this summer, at Catherine McAuley College. Reading Laboratory, Speech Clinic, Testing and Guidance Center. There is about equal representation of public and parochial schools.

Besides the college center, there are branches at Holy Cross and St. Helen schools, at Holy Family, Auburn, and St. Michael, Newark. Sisters in charge of the respective branches are: Sister Mary Terrance, Sister Mary Lambert, Sister Mary Rosaire, and Sister Mary Johanna. Sister Mary de Pazzi, dean of Catherine McAuley College, is director of the college reading laboratory and Sister Mary Helena is registrar. Sister Mary Frances Gabriel is administrator of the English and math skills program.

Sister Mary Rosaire is one of four sisters who does individual psychological testing throughout the summer session. She is here shown administering a clinical I.Q. test: the Wechsler Intelligence Scale for Children. Such an individually administered intelligence test gives a child who doesn't read well the opportunity to show his true intellectual capacity. A child with a high I.Q. and a low reading achievement score is a good candidate for a reading laboratory. Only children of normal or above intelligence are accepted.

Sister Mary Pius and Sister Mary Kristin conduct the speech therapy program for children of all ages with all types of speech difficulties. Sister Mary Pius is shown conducting an audiometer test to check the hearing of the youngster.

Reading classes have a maximum of eight students, but some groups are smaller, depending on the needs of the members. When children are matched with others of equal strengths and weaknesses, they feel more comfortable and are more willing to face their difficulties. Emotional problems are frequently attendant upon reading difficulties, so personality testing and guidance are an important part of the program. Projective tests are given to those who need analysis of some depth.

Results at the end of each summer typically indicate a gain of several months in reading achievement for most children who attend the reading laboratory. Some make phenomenal gains.

Sister Mary de Pazzi, dean of the college and director of the special services, has become accustomed to frequent visits of interested educators, wanting to observe the laboratory in process. In the photo, a group of reading consultants confer with her after touring the special services wing.

Parent conferences are an important feature of the reading laboratory. Individual conferences are conducted daily. Nine group conferences were conducted during July.

Parents of children being given speech therapy had the opportunity this summer to observe their children's speech sessions through a mirror-pane observation room. This room is likewise useful for young Sisters to observe the teaching of reading and speech, as well as the administration of psychological tests. The observers can see and hear all that transpires in the next room without being seen.

Novices try their hand at silk screening in Sister Mary Lisette's Crafts Class.

Biology class offers interest for Sister Stephanie, Sister Mary Jane Frances and Sister Marian.

Sounds are made with the help of mirror and tape recorder in Sister Pius speech class.

Panel discussion by novices in Psychology course is chaired by Sister Leonard.
