GE has paired its Heavy Duty 18 Washer with GE Versatronic Dryer for an efficient home laundry team.

The GE washer is completely versatile—with our exclusive mini-wash basket you can do a small load in less than ten minutes and conserve on water, or use the regular cycle and do up to 18 lbs. of laundry at one time.

But study the washer's back panel. It speaks for the washer's versatility . . .

Pair the washer with this GE dryer and eliminate drying guesswork. The GE dryer regulates the drying time automatically, according to the fabric type; it senses the dryness of the laundry electronically.

Permanent press fabrics are given special attention. When they are done, they are "ironed" for you.

Model DDE7900L

- The multiple selector for wash and spin speeds—on the left—allows you to gear the washer to any type of fabric. This is important for the life of your clothes.
- Select the water level to suit the load size.
- Turn the dial to Mini-Quick, when using the Mini-Basket, for a complete wash cycle of less than ten minutes — important when you are in a hurry.
- For really bright, fresh clothes, you can turn to "Extra Rinse" to wash away any clinging detergents or washing residue.
- The Permanent Press Cycle cools the wash down—leaving your permanent press items with a minimum of wrinkles.
- Before laundering heavily stained or soiled fabrics turn to "Soak Cycle" for the cleanest results.
- For maximum washing without increasing the amount of water or detergent, use the "Extra Wash" cycle.

See the GE laundry team at the RG&E Appliance Sales Department, 89 East Avenue.
