Dryer with
Automatic
Dry Cycle

\$159.95

Model DDE7100L

Home laundry has never been so easy! GE's heavy duty automatic washer has a permanent press cycle that sprays cold water during spin to eliminate hard creases. Extra small loads or items you need in a hurry are no longer a problem, either: the exclusive Mini-Basket saves water and detergent as you wash small loads, and the brand-new Mini-Quick cycle completely launders a Mini-Basket load in less than 10 minutes! A new pre-soak feature gives you the flexibility to use the modern washing aids without the mess of extra tubs and additional handling of wet clothes. In this cycle, the washer will fill, agitate, soak for about 30 minutes and spin the water out—automatically!

Permanent press fabrics were made for a dryer, since only a dryer tumbles out wrinkles properly. GE's high speed electric dryer with the automatic dry cycle dries and irons your permanent press clothes and calls you with a signal buzzer one minute before the load is ready to be removed. New wrinkles won't even have a chance to set in. There are automatic cycles for regular, delicate and extra heavy clothes, too, and no-heat tumbling freshens clothes and bedding. You can choose a timed cycle, too. Many other work saving features, and GE quality, make this washer and dryer really modern enough to match today's fabrics. White only. Budget terms available.
