

ADDING IT UP IN NEW YORK IT WAS A MONSTROUSLY PRODUCTIVE YEAR!

New York has become the abortion capital of the world with hundreds of thousands of abortions performed in hospitals, doctors offices, clinics as millions of dollars buys death by abortion in our state. It is our newest industry. Official figures for just one year show nobody really knows how many abortions are being committed. But the Health Department estimates at least 215,453 during the first year alone. Since reporting of abortions is required, but carries no penalty if not reported, the state has to "estimate" the true figure.

Sixty-two of the abortions during the first year resulted in live births! This startling paragraph in the report says "56 died within several hours. There are no recorded death certificates for the remaining 6 births." It is known that at least one "product of an abortion" not only lives but was placed for adoption after the planned abortion became a live birth.

From the records, it shows more than half (over 53%) of the abortions were done to women who came to New York specifically for the abortion. There is no way of telling what complications resulted from this staggering total. Once a woman goes back home, the case is closed. No one knows or can know if she lives or dies, suffers trauma, sterility, complications. All that is known is her baby is no more.

Abortion is now a major business in New York. There are organizations arranging abortion, clinics where only abortions are performed, special transportation at airports. Who are the patients? 61% of the women were under 25. Fourteen died as a result of their abortion. For nearly half, it would have been their first child.
