Kits Help the Handyman

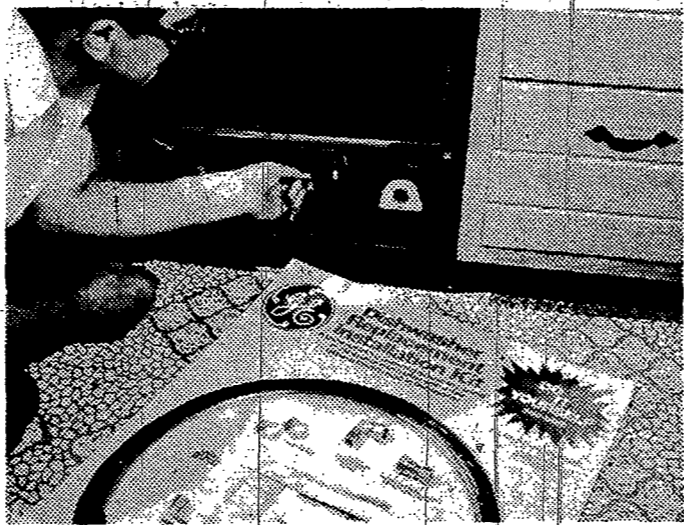

For the homeowner planning to replace an out-of-date or leaking built-in dishwasher, saving the cost of installation could be the difference between buying a deluxe model and an unfeathered one.

Self-installation by the home handyman, therefore, could be the way to keep a homemaker happy while staying within a budget.

To help the handyman replace most old built-in dishwashers on their last legs with a new General Electric built-in model, the appliance maker has developed a do-it-yourself dishwasher replacement kit.

The kit contains all the parts, such as rubber drain hose and clamps, copper water line, brass elbows and unions and electrical connectors, needed for a typical installation that includes removal of the old appliance, alteration of the existing plumbing and electric supply, and wiring and installation of the new General Electric built-in dishwasher. An electrical test light is also provided in the kit. The only installation tools normally needed are a screwdriver, wire cutter, tube cutter and a crescent wrench; no soldering is required.

Detailed instructions, diagrams and illustrations on the backside of the kit take the do-it-yourselfer through the 17 steps of removal and replacement,

with particular attention to safety and proper installation preparation procedures.

Steps 1-7 cover removal of the old dishwasher, starting with the water and electricity shut-off. The electric test light is used to be sure the correct circuit breaker has been thrown.

Removal is completed by disassembling electrical connectors, disconnecting the water supply line and drain hose, and removal of screws or fasteners that hold the dishwasher in place.

Now the handyman is ready to prepare for installation of the new General Electric dishwasher. Steps 8-11 and the accompanying eight illustrations show how to alter the existing electric supply, hot water inlet plumbing, and drain connections.

Before operating the new General Electric dishwasher, a re-check of all connections is recommended. The dishwasher is then started, according to instructions in the Use & Care booklet, and a check is made for leaks after one complete cycle.
