

Plug into 1980's high interest rates through 1982.

How can you be sure that today's attractive rates will stay just as attractive over the next few years?

Listen to the Marine. For as little as \$500 you can help make your money survive the next two and a half years. So you don't have to have a fortune to get these high rates:

12.65%

Effective annual yield on 11.75%. Minimum deposit \$500.

11.75%

Annual interest rate offered throughout April. May change at renewal.

This investment is called a two and a half year money market certificate. And if you choose to plug in for \$5,000 or more, between now and April 25, 1980, you can get one

of the gifts shown below. Some of them even plug in. Like a Timex Digital Electric Alarm Clock. Or a Gillette Max 1000 Hair Dryer. Or a Waring 7-speed Blender.

The point is, if you plug into today's high interest rates, you'll get them for the next two and a half years. And with interest compounded daily, your money will really be fighting back at inflation.

Naturally, there is a substantial penalty for early withdrawal. But we think this is such an excellent long-range economic plan that once you plug into it, you'll have it for two and a half years.

When you tell it to the Marine, we listen to what you say.
