

## At this Congress, tomorrow's scientists will be in session.

This month, for the first time, the New York State Science Congress is being held in the Rochester area. More than 100 high school students, winners of their local Science Fairs, will meet to compete in three fields: science projects; science fiction writing; and science ethics/public speaking. And, to see science at work at Kodak.

The two-day Congress is a

cooperative effort with the Science Teachers Association of New York State and the State University of New York at Brockport. Besides providing financial sponsorship for the session, we'll be opening the doors of the Kodak Research Laboratories. There, the students will see photographic science in action and have a preview of the future.

Our involvement here reflects more than a casual interest in the efforts of bright students.

Kodak exists today because, a century ago, young George Eastman had the scientific curiosity and creativity to change his world. If we are to continue his start on tomorrow, we need to inspire exceptional young people like these.
