Dead Sea Scrolls fragments of the past

The discovery of the Dead Sea Scrolls, which are fragments of ancient Hebrew and Greek manuscripts, has provided a link to the past. The scrolls were found in a cave near the Dead Sea in 1947. The scrolls are believed to be the oldest copies of the Hebrew Bible, and they provide a window into the lives of the people who lived in the region during the time of the Second Temple. The scrolls were discovered by a Bedouin shepherd named Khalid al-Sayid, who was looking for a new place to graze his sheep. When he noticed a cave he had never seen before, he went inside and found the scrolls. The scrolls were then taken to the British Museum, where they were studied and identified.
